To meet the stated thermal resistances(R-Values), the manufacturer provides the following specifications:

Blanket Insulation

Blanket and batt fiber glass insulation when installed according to the manufacturer's recommendations will provide the stated R-Value.

ThermaGlas®

Loose Fill Insulation 03M04250

Stated R-Value is provided by installing the required number of bags per 1,000 sq. ft. at a thickness not less than the label minimum thickness. Installation of the required number of bags may yield more than the specified minimum thickness and minimum sq. ft. weight. Failure by the installer to provide both the required bags and at least the minimum thickness will result in lower insulation R-Value.

Specification For Open Blow Attics

Nominal net weight of insulation per bag is 35 lbs.

*The higher the R-Value, the greater the insulating power. Ask your seller for the fact sheet on R-Values.

All insulations vary in thermal performance due to factors such as aging, mean temperature, settlement, convection, moisture absorption and installation variation.

Convection in glass loose-fill insulation installed in open attics can reduce its thermal performance at extreme winter temperatures during the heating season. Glass fiber batts and blankets ARE NOT impacted by convection.

ThermaGlas may deliver reduced thermal performance due to convection at low outside temperatures. ThermaGlas has been designed to anticipate this phenomenon and provide the labeled performance on average over the winter heating season. The dollar impact to a homeowner's annual heating costs from loose-fill convection is estimated to be minimal if any when compared to labeled performance. For more information on the performance of ThermaGlas contact your local Owens-Corning representative.
