John E. Tucker, Director
Department of Building & Safety
400 East Stewart Avenue
Las Vegas, NV. 89101

re C-68-93, Valley Hospital Cath Lab, Special Inspector

Dear Mr. Tucker

Massanari Bemis Associates, Inc. hereby requests the City of Las Vegas (CLV) to employ Special Inspector during the construction of the above project pursuant to the provisions of Section 306 of the Uniform Building Code, 1988 Edition

When the City appoints such Special Inspector of the City's choice, Massanari Bemis Associates, Inc. will agree to pay all charges required by the new City Contract, which will be on an hourly basis, overtime charged at 1 1/2 time. Massanari Bemis Associates, Inc. will reimburse the City monthly. Any percentage annual salary increases allowed for regular City employees in similar classifications will also be applied to such Special Inspector.

Special inspection shall include but not be limited to the following

1. Foundation and concrete reinf, embeds
2. Structural Steel, Metal Deck
3. Welding shop field.
4. H.S. bolts.
5. Drilled inserts/grouting

Non destructive testing by approved testing laboratory - overall special inspection by City of Las Vegas.

In addition to the above, Massanari Bemis Associates, Inc. agrees to the following

1. To provide separate office, minimum 8' x 8' in size, for Special Inspector, having a temporary 6' x 3' drafting table, with chair and separate telephone, and shall be equipped with heating and cooling system and door with locking device.
2. Provide two parking spaces, one for Special Inspector and one for regular inspectors.

Sincerely,

Tim Massanari

MEMORANDUM

DATE MAY 25, 1993

TO THE CITY OF LAS VEGAS BUILDING DEPARTMENT

ATTENTION THOM COOLEY

FROM ROBERT E LEE, SPECIAL INSPECTOR

REFERENCE SOUTHWEST MEDICAL ADMINISTRATION OFFICE BUILDING

THIS MEMO IS PREPARED IN COMPLIANCE WITH THE UNIFORM
BUILDING CODE 306 123

DURING THE PRESENCE OF THE SPECIAL INSPECTOR, FROM FEBRUARY
23, 1993 TO MAY 14, 1993, THE FOLLOWING WORK WAS OBSERVED

- 1 EXCAVATION FOR CONTINUOUS PERIMETER WALL FOOTING'S AND
COLUMN FOOTING'S
- 2 PLACING REBAR AND CONCRETE FOR FOOTINNG
- 3 PLACING REBAR AND CONCRETE FOR COLUMNS
- 4 PLACING CMU'S, REBAR AND GROUT FOR PERIMETER WALLS UP
TOO FIRST FLOOR LEVEL
- 5 PLACING FORMS, REBAR AND CONCRETE FOR FLOOR SLAB ON
GRADE
- 6 PLACING FORMS, REBAR, POST TENSION CABLE, COLUMN ANCHOR
BOLTS AND CCONCRETE FOR 1ST FLOOR SUSPENDED SLAB AND
ELONGATING THE CABLES
- 7 PLACING THE STRUCTURAL STEEL AND MAKING THE FULL PENN
WELDS FOR THE RIGID CONNECTIONS
- 8 FRAMING THE 1ST AND 2ND FLOOR PERIMETER WALLS PLACING
TRUSSES AND PLYWOOD FOR THE 2ND FLOOR AND ROOF ALSO
PLACING SHEATHING FOR SHEAR WALLS ON THE 1ST AND 2ND
LEVELS
- 9 PLACING CMU"S, REBAR AND GROUT FOR THE STAIRWELL AND
ELEVATOR SHAFT UP TO THE ROOF LINE AND CAPPING WITH
CONCRETE

ALL CHANGES, ADDITIONS, CORRECTIONS TO NON COMPLIANCE ITEMS
WERE APPROVED BY THE ARCHITECT AND ENGINEER OF RECORD

TO THE BEST OF MY KNOWLEDGE ALL MATERIALS WERE IN ACCORDANCE
WITH THE PLANS AND SPECIFICATIONS AND THE APPLICABLE WORKMANSHIP

re New Tower at Valley Hospital
PAC # C91
Architect's Job No. 89009

Dear Mr. Rice

At the request of the City of Las Vegas Building Inspector we have reviewed the manufacturer's literature for the carpet, vinyl wall fabric and wall carpet and have found them to be in compliance with the flame spread and smoke developed requirements for finish materials.

If you have any questions regarding this matter please contact us at your convenience.

Regards,

William R. Bemis

re New Tower at Valley Hospital
620 Shadow Lane
Permit # C-91 (1991)
Architect s Job No 89009

Dear Mr Tucker

As we have discussed with Mr Thom Cooley and his staff Valley Hospital and its Contractor Pepper/Jaynes are seeking a partial occupancy of this Project The areas involved are the two patient floors and the related operational and public safety amenities Areas which are excluded from this partial occupancy request are the Ground Floor and Basement and the new elevators The stairways and mechanical/electrical/fire control equipment rooms are included in the request

The Contractor has directed us to request on behalf of the Owner that a final inspection for this Partial Occupancy be scheduled for Monday February 8 at which time they expect all necessary items to be complete

If you have any questions regarding this matter please contact our office at your convenience

Respectfully submitted

William R Bemis

Report No 4004

November 1990

Filing Category: **EXTERIOR COATINGS (060)**

**OMEGA DIAMOND WALL INSULATING
EXTERIOR STUCCO SYSTEM
OMEGA PRODUCTS CORPORATION
POST OFFICE BOX 5158
SANTA ANA, CALIFORNIA 92704**

I Subject: Omega Diamond Wall Insulating Exterior Stucco System

1 Description: A General The Omega Diamond Wall Stucco System is a proprietary mixture of portland cement, sand, fibers, water and proprietary ingredients reinforced with wire fabric or metal lath and applied to substrates of expanded polystyrene (EPS) insulation board and gypsum sheathing. The system is installed on exterior walls of wood or steel stud construction.

B Materials 1 Omega Diamond Wall Concentrate A factory-prepared mixture of Type I or Type II portland cement complying with U B C Standard No 26-1, chopped fibers and proprietary additives. The mixture is packaged in 80 pound bags. Approximately 4 1/2 to 6 gallons of water and between 160 and 200 (acrylic fiber) or 240 (glass fiber) pounds of sand are added to each bag in the field which is mixed in accordance with the manufacturer's recommendations.

2 Sand Must be clean and free from deleterious amounts of loam, clay, soluble salts and organic matter. Sampling and testing must comply with ASTM C 144. Sand must be graded within the following limits.

Retained on U S Standard Sieve	Percent Retained by Weight + 2 Percent	
	Min	Max
No 4	—	0
No 8	0	17
No 16	10	40
No 30	30	65
No 50	70	90
No 100	95	100

3 Insulation Board a Expanded polystyrene (EPS) insulation board has a nominal density of 1.5 pounds per cubic foot, a Class I flame-spread rating and a smoke-developed rating not exceeding 450. Unbacked boards are 1 to 1 1/2 inch thick and provided with 3/8-inch high tongues with compatible grooves for horizontal joints. See Figure No. 1 for joint detail. All boards must have recognition in an evaluation report issued by ICBO ES or the National Evaluation Service. See Section II H for board identification.

b Form-Cor board is as described in Evaluation Report No. 3335.

4 Lath a Wire Fabric Lath Minimum No. 20 gauge, 1 inch galvanized steel woven wire fabric. Lath must be self furred or furred when applied over all substrates except unbacked polystyrene board. Self furring lath for coatings must comply with the following requirements:

1 The maximum total coating thickness is 1/2 inch.

2 Furring crimps must be provided at maximum 6 inch intervals each way. The crimps must be the body of the lath 1/8 inch minimum from the substrate after installation.

b Metal Lath Complies with Table No. 47 B of the code. Furring and self furring requirements are as set forth for wire fabric lath.

5 Gypsum Sheathing Board Water resistant core gypsum sheathing complying with U B C Standard No. 47.0.

6 Fiberboard Minimum 1/2-inch thick asphalt-impregnated fiberboard complying with U B C Standard No. 25.24 as a regular density sheathing.

7 Plywood Minimum 3/4-inch thick plywood with exterior glue for studs spaced 16 inches on center and minimum 3/8 inch thick plywood with exterior glue for studs spaced 24 inches on center. Plywood complies with U B C Standard No. 25.9.

8 Caulking Acrylic latex caulking material complying with ASTM C 834.

9 Weather resistive Barrier Minimum Grade D kraft building paper complying with U B C Standard No. 17.10 asphalt-saturated rag fabric complying with U B C Standard No. 32.1 is required. The weather resistive barrier is placed over all substrates except for EPS board where the barrier may be behind the board. Application of the barrier complies with Section 1707 (a) of the code. When applied over any wood based sheathing the barrier must be a minimum two layers of Grade D building paper as set forth in Section 4706 (d) of the code.

10 Fibers Glass fibers Type E 1/4 inch long or 3/8 inch long BASF acrylic fibers (Evaluation Report No. 448) for shorter term benefits during initial curing.

11 Admixtures Proprietary ingredients included to improve quality of coating mixture.

12 Miscellaneous All trim, screeds and corner reinforcement must be galvanized steel or approved plastic.

C Installation 1 General The exterior cementitious coating is applied by hand troweling or machine spraying in one coat to a minimum 3/8 inch thickness. The lath must be embedded in the minimum coating thickness and therefore cannot be exposed. Conventional water based paints may be applied after 48 hours curing of solvent based paints after 10 days curing. Fasteners for lath must penetrate 1 inch minimum into wood studs. Flashing, corner reinforcement, metal trim and weep screeds must be installed as shown in attached details. See Figure No. 2. The coating is applied at ambient air temperatures ranging from 40°F to 100°F by applicators approved by Omega Products, Inc. The weather resistive barrier must be applied as set forth in Section II B 9. An installation card as noted in Figure No. 3, must be on the jobsite with the name of the applicator and the product to be used before any weather resistive barrier or exterior sheathing is installed. Also see Section IV 6 of this report.

2 Application Over Open Framing a EPS Insulation Board The weather resistive barrier is placed over open studs spaced 24 inches on center maximum. The EPS board described in Section II B 3 is then placed

Evaluation reports of ICBO Evaluation Service, Inc., are issued solely to provide information to Class A members of ICBO utilizing the code upon which the report is based. Evaluation reports are not to be construed as representing aesthetics or any other attributes not specifically addressed nor as an endorsement or recommendation for use of the subject report.

This report is based upon independent tests or other technical data submitted by the applicant. The ICBO Evaluation Service, Inc. technical staff has reviewed the test results and/or other data, but does not possess test facilities to make an independent verification. There is no warranty by ICBO Evaluation Service, Inc. express or implied as to any "finding" or other matter in the report or as to any product covered by the report. This disclaimer includes, but is not limited to, merchant ability.

horizontally with tongues faced upward and is temporarily held in place with galvanized staples or roofing nails. Vertical butt joints must be staggered a minimum of one stud space from adjacent courses and occur directly over studs. The weather resistive barrier may be deleted from the system under the following conditions:

1. Specific approval of the building official to delete the barrier is obtained.
2. The annual rain fall at the project location is less than 45 inches per year.
3. The substrate for the wall coating is 1.5 pcf nominal density (1.35 pcf minimum) minimum 1 inch thick Type I polystyrene insulation board. Other board requirements are as set forth in Section 11.3 (a). The insulation board must be specifically recognized in an evaluation report for use with cementitious exterior wall coatings.
4. All vertical joints of the polystyrene must be backed by minimum 2 inch nominal width framing members or flanges.

The lath is then applied tightly over the polystyrene board and fastened through the board to wood studs using No. 11 gauge galvanized roofing nails with $2\frac{7}{16}$ inch head diameter or No. 16 gauge galvanized staples spaced 6 inches on center with a minimum 1 inch penetration. Staples have a minimum crown width of $\frac{7}{8}$ inch. Stapling is permitted only in Group II wood species. Care must be taken to avoid overdriving fasteners. The lath is applied with $1\frac{1}{2}$ inch end and side laps. Wall bracing in accordance with Section 2517 (g) 3 of the code or acceptable alternate is required. For application to minimum No. 20 gauge (0.0396 inch minimum) steel studs spaced 24 inches on center maximum, minimum $1\frac{1}{2}$ inch by No. 17 gauge woven wire lath is applied over the EPS board with 2-inch laps and secured with No. 6 screws having a $\frac{3}{4}$ -inch-diameter pan head at 7 inches on center to all studs and track. Screws must penetrate studs $\frac{1}{2}$ inch minimum. Outside wall corners and parapet corners are covered with extra metal corner reinforcement. Weep screeds are installed at the bottom of the wall in accordance with Section 4/05(e) of the code. Galvanized steel $1\frac{3}{8}$ inch J-shaped trim pieces are installed at other areas where foam is exposed. At windows and doors, butting J trim metal edges must be caulked. Holes for hose bibbs, electrical panels and other penetrations of substrate surfaces except those caused by fasteners must also be caulked. The coating is applied after caulking as described in Section II C 1.

b. Fome Cor Board. The Fome Cor board is applied in accordance with Evaluation Report No. 3335 to wood studs 16 inches on center maximum followed by $\frac{1}{2}$ inch by No. 17 gauge woven lath lapped 2 inches. The lath is secured through the Fome-Cor to the studs with No. 16 gauge staples 1-inch crown of sufficient leg length to penetrate studs 1 inch minimum. The Diamond Wall is applied as described in Section II C 1 to a minimum $\frac{3}{8}$ inch thickness. Additional installation requirements are as noted in Section II C 2 (a).

3. Application Over Solid Barking: a. Fiberboard. Minimum $\frac{1}{2}$ inch thick fiberboard is installed directly to wood studs spaced 24 inches on center maximum. The fiberboard is temporarily held in place with corrosion resistant staples or roofing nails. Two layers of Grade D building paper is applied over the fiberboard prior to the lath. The lath is then attached to the studs through the sheathing with fasteners and spacing described in Section II C 2 (a) of this report or Table No. 25 Q of the code, whichever is more restrictive. All walls must be braced in accordance with the code. Exposed sheathing edges are protected with screeds. Holes in the substrate surface are caulked and the coating applied in accordance with Section II C. The fiberboard lath and coating may be applied to minimum No. 10 gauge (0.0396 inch minimum) steel studs spaced 24 inches on center maximum provided the fasteners and their placement are as set forth in Section II C 2 (a) for steel studs.

b. Gypsum Sheathing. Minimum $\frac{1}{2}$ inch thick, water-resistant core gypsum sheathing is installed directly over wood studs spaced 24 inches on center maximum. Gypsum sheathing is fastened in accordance with Table No. 47 C of the code. A weather resistive barrier of building paper is applied over the gypsum sheathing prior to lath or optional insulation board. The lath is then attached to studs through the sheathing with fasteners and spacings as described for insulation board in Section II C 2 of

this report. All walls must be braced in accordance with the code. Exposed sheathing edges are protected with screeds. Holes in the substrate surface are caulked and the coating applied as described in Sections II C 1 and C 2.

Application to minimum No. 20 gauge steel studs at a maximum of 24 inches on center is permitted provided No. 8 gauge Type S dry wall screws with a 1 inch diameter washer are installed at the same spacing as nails or staples in wood studs.

c. Plywood. Plywood is applied directly to wood studs under the conditions set forth in Section II B-7 of this report and Table No. 25 N 1 of the code. The weather resistive barrier, wire fabric lath and coating are applied as described in Section II C 3 (a) for fiberboard. Installation to minimum No. 20 gauge (0.0396 inch minimum) steel studs spaced 24 inches on center maximum is also as described in Section II C 3 (a) for fiberboard.

D. One hour Fire resistive Assembly: 1. a. Interior Face. One layer of $\frac{5}{8}$ -inch thick Type X gypsum wallboard, water-resistant, backer board or veneer base is applied parallel or at right angles to the interior face of 2 by 4 wood studs spaced 24 inches on center maximum. The wallboard is attached with 6d coated nails $1\frac{1}{8}$ inches long with a $\frac{1}{4}$ inch diameter head at 7 inches on center to studs, plates and blocks. All wallboard joints must be backed with minimum 2 x 4 wood framing, taped and treated with joint compound. Fastener heads must also be treated with joint compound.

b. Exterior Face. One layer of minimum $\frac{5}{8}$ inch thick Type X water resistant core gypsum sheathing 48 inches wide is applied parallel to studs with No. 11 gauge galvanized roofing nails with $\frac{1}{2}$ or $\frac{1}{4}$ inch-diameter heads at 4 inches on center at board edges and 7 inches on center at intermediate studs. The sheathing is nailed to top and bottom plates at 7 inches on center. A weather resistive barrier is required over the sheathing. The lath and wall coating are then applied as described in Section II C 2.

2. a. Interior Face. One layer of $\frac{5}{8}$ inch thick Type X gypsum wallboard applied horizontally to the interior face of wood studs spaced 24 inches on center maximum. The wallboard is fastened to studs with 5d gypsum wallboard nails with a minimum $1\frac{1}{4}$ inch diameter head at $\frac{3}{8}$ inches long at 6 inches on center to studs, plates and sills. All wallboard joints must be backed with minimum 2 by 4 wood framing taped and treated with joint compound. Fastener heads must also be treated with joint compound. Mineral wool insulation on batts $3\frac{1}{2}$ inch thick R-13 1.97 pcf density are placed in the cavities between studs and secured to studs.

b. Exterior Face. A weather resistive barrier is applied over the exterior face of wood studs in accordance with Section II B 7. One inch thick 5 pcf density EPS board is applied in accordance with Section I C 2 (a) followed by $\frac{1}{2}$ inch by No. 20 gauge woven wire lath. The lath is fastened through the EPS board to studs and plates with No. 11 gauge galvanized roofing nails 2 inches long $\frac{3}{8}$ inch-diameter heads at 6 inches on center. Lath overlaps are 2 inches minimum. The Diamond Wall mixture with glass fibers only, is then applied to the lath in accordance with Section II C 1.

E. Noncombustible Construction. The stucco system may be installed on exterior walls required to be noncombustible construction as follows:

1. Interior Finish. One layer of $\frac{5}{8}$ inch thick Type X gypsum wallboard complying with U.B.C. Standard No. 47.11 is applied vertically to steel framing with all edges blocked. Fasteners are No. 8 by $1\frac{1}{4}$ inch long buglehead screws fastened to board joints at 8 inches on center and in intermediate locations at 12 inches on center. All joints are taped and treated with joint compound. Intermediate fasteners are treated with compound.

2. Steel Framing. Minimum $3\frac{5}{8}$ inch deep minimum No. 20 gauge steel studs (0.035 inch thick) spaced 16 inches on center maximum.

3. Openings. Wall openings are framed with minimum 0.125-inch thick aluminum or steel framing.

4. Exterior Finish. One layer of minimum $\frac{1}{2}$ -inch thick gypsum sheathing complying with U.B.C. Standard No. 47.10 is applied horizontally to the steel framing with No. 8 by $1\frac{1}{4}$ inch long buglehead screws spaced 8 inches on center at all framing locations.

5. Stud Cavity. Where studs continue past floor levels, stud cavities at each floor level must be blocked with Thermafiber insulation. The Thermafiber insulation (Evaluation Report No. 2331) is fit into each stud cavity at

the floor. The insulation has a minimum nominal 4 pounds per cubic foot density is 4 inches thick and is approximately 6 to 8 inches wide. To fit between a stud cavity it must be long enough to achieve a friction fit.

6 Sturco System Where a weather-resistive barrier is required the stucco system includes application of one layer of Pyro-Kure 600 vapor retarder manufactured by Fortifiber. Pyro-Kure vapor retarder has a maximum flame-spread of 25, a maximum smoke-developed rating of 30 and qualifies as a Type 1 Grade A weather-resistive barrier in accordance with UBC Standard No. 17-1. The vapor retarder is installed over the sheathing in accordance with Section 1707 (a) of the code. Expanded polystyrene insulation board with a nominal 1.5 pound per cubic foot density is installed at 1 inch thickness horizontally in running bond to the sheathing. Reinforcement consists of 1 inch by No. 20 gauge galvanized steel self-furring woven wire fabric lath. The lath, insulation board and vapor retarder are positively fastened to the steel framing using No. 8 by 2 1/2-inch long waferhead self-drilling screws spaced at 6 inches on center to all framing members. The stucco is applied at a 3/8 inch minimum thickness in accordance with Section II C of this report.

F Shear Wall A shear wall providing wall bracing required by Section 2517 (g) 3 of the code may be constructed using the Diamond Wall System. The individual shear walls must have a maximum height-to-length ratio of one to one. Wall framing is minimum 2 by 4 studs spaced 16 or 24 inches on center. Forme-Cor sheathing recognized in Evaluation Report No. 3335 is applied to framing with 4-inch horizontal weather laps and 6 inch vertical laps and spot fastened into place. The 1 1/2 inch hexagonal opening No. 17 gauge woven wire lath is then applied over Forme-Cor and fastened to all framing members at 6 inches on center with No. 16 gauge corrosion-resistant staples having a 1-inch crown. The staple legs must be 1 1/4 inch long minimum and long enough to penetrate framing at least 1-inch. The lath is overlapped 3 inches minimum. Lath overlaps should be offset from Forme-Cor overlaps. The Diamond Wall Coating is applied in two coats in accordance with Section II C 1. The base coat is 1/2 inch thick minimum and is cured in accordance with Section II G 3. The finish coat is 1/8 inch minimum and is applied after properly curing the base coat.

The allowable racking shear for walls is 170 plf.

C Miscellaneous 1. **Inspection Requirements** Building department inspection is required on lath installation prior to application of the coating as noted in Section 305 (e) 4 of the code.

2. **Control Joints** Control joints must be installed as specified by the architect, designer, builder or exterior coating manufacturer in that order. In the absence of details, conventional three coat plastering details must be used.

3. **Curing** Moist curing must be provided for 24 hours after coating application.

4. **Soffits** The system may be applied to soffits, provided the coating is applied over metal lath complying with Table No. 47 B of the code. Lath of wire fabric lath. Metal lath fastening must comply with Table No. 47 C except the length must be increased by the thickness of any substrate.

5. **Sills** The system may be applied to sills at locations such as windows and other similar areas.

Sill depths 6 inches or less may have the coating and lath applied to any substrate permitted in this report, provided the coating, lath, weather-resistive barrier and substrate are installed in accordance with the appropriate section of this report. Sill depths exceeding 6 inches must have substrates of solid wood or plywood. The substrate is fastened in accordance with Table No. 25 C of the code over which a double layer of a complying weather-resistive barrier is applied. The coating, lath and optional EPS board are applied in accordance with Section II C 2 of this report.

H 1989 Supplement to the UBC Editorial changes only. Technical requirements are unaffected by the Supplement.

I Identification The factory prepared mix is delivered to the jobsite in labeled 80-pound water-resistive bags with labels bearing the following information:

- 1 Name and address of manufacturer and evaluation report number
- 2 Identification of components
- 3 Weight of packaged mix
- 4 Storage instructions
- 5 Maximum amount of water and other components that may be added and conditions that must be considered in determining actual amount added
- 6 Curing instructions.

Polystyrene foam plastic insulation boards are identified in accordance with their respective CBC/ES/NES evaluation reports. Additionally, the board density must be noted. When applied to walls required to be non-combustible construction, each board along one edge and one board in each package on both faces must be identified with the foam plastic evaluation report number Omega Diamond Wall and Evaluation Report No. 4004.

III Evidence Submitted Data in accordance with the CBC/ES Acceptance Criteria to Cementitious Exterior Coatings—June 1990 data in accordance with Section 1712 (b), 4 B of the code and records of racking shear tests.

Findings

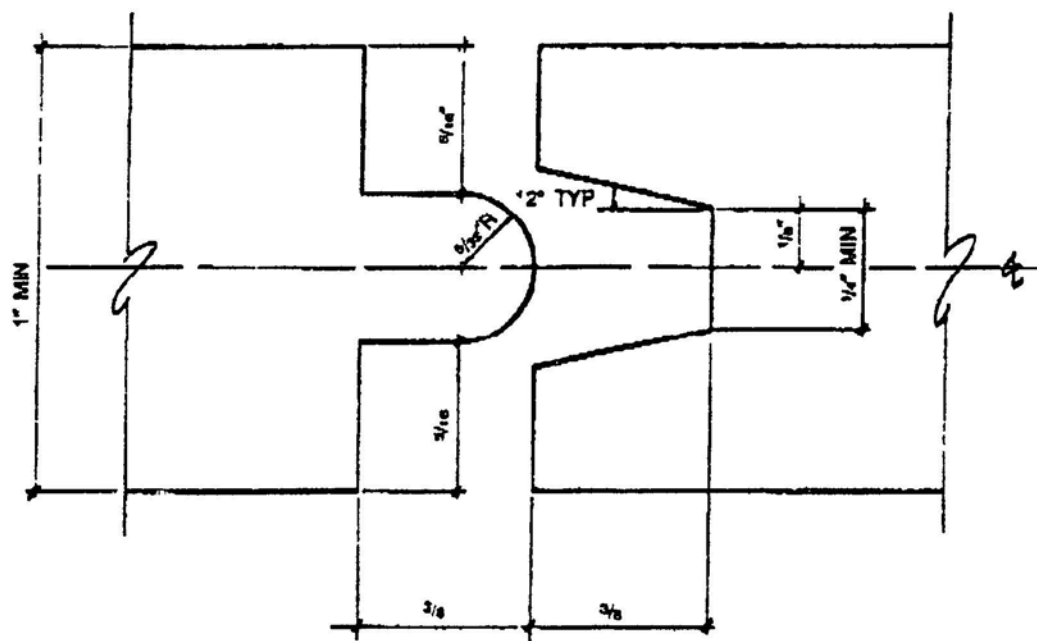

IV Findings That the Omega Diamond Wall Insulating Exterior Stucco System described in this report complies with the 1988 Uniform Building Code, subject to the following conditions:

- 1 The material and methods of installation comply with this report and the manufacturer's instructions.
- 2 Installation is by contractors approved by the manufacturer.
- 3 The system may be installed on walls required to be of noncombustible construction in accordance with Section II E.
- 4 The system is recognized as a one hour fire resistive assembly when complying with Section II D of this report. The design stress for the system described in Section II D is limited to 0.78 F_c and the maximum stress may not exceed 0.78 F_c at a maximum l/a/d ratio of 33.

Loads applied to the one hour fire resistive wall assembly described in Section II D 2 may not exceed the following, whichever is less:

- a 1100 pounds per stud
- b Design stress of 0.78 F_c in accordance with Section 2507 (c) of the code
- c Design stress of 0.78 F_c at a maximum l/a/d of 33 in accordance with Section 2507 (c) of the code
- 5 The interior of the building is separated from the EPS board with a thermal barrier complying with Section 1712 of the code such as 1/2-inch regular gypsum wallboard applied in accordance with Table No. 47 G of the code.
- 6 An installation card, as shown in Figure No. 3 is left at the job site for the owner and a copy filed with the building department.
- 7 The allowable wind load on the system with wood or steel studs 24 inches on center maximum is 35 psf positive or negative. Supporting framing must be adequate to resist the required wind loads.

This report is subject to re-examination in two years.
