ANALYSIS

This site is currently undeveloped and is located within a FEMA AE Flood Zone. The FEMA website www.floodsmart.gov defines an AE Flood Zone as areas with a 1% annual chance of flooding and a 26% chance of flooding over the life of a 30-year mortgage. The applicant proposes to develop a mixed use project consisting of 213 condominium units and 29,717 square feet of office space. The offices and condominiums will be located in buildings that range in height from two to five stories, with the higher parts of the buildings (72 feet in height) located in the north and east portions of the site in order to comply with the residential adjacency standards. The site is located in a portion of the A-O (Airport Overlay) District where building height is limited to 175 feet. The proposed buildings comply with this limitation.

Parking is provided on a surface lot in the west portion of the site and on the lower level of a two level structure in the east portion of the site. City standards require 11 handicap parking spaces for a development of this size. Because the site plan depicts only seven handicap parking spaces, staff has included a condition of approval (number 4) which requires the provision of four additional handicap spaces. A common area which includes gazebos, potted plants and a pool will be located on the second level of the structure.

Access to the site will be provided by a driveway to Tenaya Way and two driveways to the existing commercial center immediately to the north. The applicant proposes to place landscape buffers with sufficient width to comply with city standards along all property lines. The buffers along the south, east and west property lines contain 24 inch box trees in quantities that comply with city standards. The amount of trees within the north buffer is not sufficient, and staff has included a condition of approval (number 5) which requires eight additional 24 inch box trees to be placed in the buffer zone along the north property line.

The elevations depict stucco exteriors with concrete tile roofs and decorative copper domes along the roof lines. The building heights vary from two to five stories (with a maximum height of 72 feet). The Zoning Code limits heights in the R-4 (High Density Residential) zoning district to two stories (not exceeding 35 feet in height). The applicant has requested a Variance (VAR-18820) from this standard which will be considered currently with this application. Because this variance request does not meet the criteria for approval, as the hardship is self-created and the applicant could revise the development to comply with the setback standards, staffs recommendation is for denial of the variance.

FINDINGS

In order to approve a Site Development Plan application, per Title 19.18.050 the Planning Commission and/or City Council must affirm the following:

1. The proposed development is compatible with adjacent development and development in the area;
2. The proposed development is consistent with the General Plan, this Title, the Design Standards Manual, the Landscape, Wall and Buffer Standards, and other duly-adopted city plans, policies and standards;
3. Site access and circulation do not negatively impact adjacent roadways or neighborhood traffic;
4. Building and landscape materials are appropriate for the area and for the City;
5. Building elevations, design characteristics and other architectural and aesthetic features are not unsightly, undesirable, or obnoxious in appearance; create an orderly and aesthetically pleasing environment; and are harmonious and compatible with development in the area;
6. Appropriate measures are taken to secure and protect the public health, safety and general welfare.

In regard to 1: The proposed development will exceed the scale and massing of any existing development in this area. Staff finds the height and intensity of the project is greater than adjacent development and is not compatible with residential development immediately to the south of this site.

In regard to 2: The project as designed is more intense than other existing or proposed developments in the area, and requires an associated height variance (VAR-18820) which would allow a 72-foot high building where 35 feet is the maximum height allowed. As such, the project is not appropriate to its context, and staff recommends denial.

In regard to 3: Adequate access to this site will be provided from Tenaya Way, a Secondary Street as designated by the Master Plan of Streets and Highways. This project will not adversely impact adjacent streets.

In regard to 4: The proposed building materials and landscape materials are appropriate for the immediate area and for the City, and are generally in compliance with the city standards.

In regard to 5: The inability of the applicant to devise a site plan that complies with the setback, standards indicate that the design characteristics of this proposal are too intense for this site.

In regard to 6: The proposed development will be subject to regular inspections for permitting and licensing and will; therefore, not compromise the public health, safety, and welfare.
