Type of Land Development/Land Disturbance Process:

☐	Rezoning	☐	Subdivison Map	☐	Clearing and grading Only
☐	Parcel Map	☐	Planned Unit Development	☒	Other (Please specify below)
☐	Large Parcel Map	☐	Building Permit	☐	Master Drainage Study

1. Total Owned Land Area: At Site: 1,662 +/- Acres Being Developed/Disturbed: All

2. Is a portion or all of the subject property located in a FEMA Flood Hazard Area? ☐ Yes** ☒ No

3. Is the property bordered or crossed by an existing or proposed Clark County Regional Flood Control District Master Planned Facility? ☒ Yes** ☐ No

4. Proposed type of development (Residential, Commercial, Etc.): Residential, Commercial, Schools, Parks, Roadways, Gaming, etc.

5. Approximate upstream land area which drains to the subject site: 6.1 sq. miles +/-

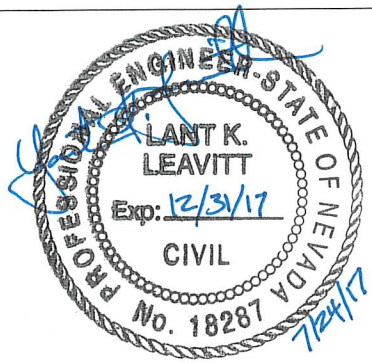

6. Has the site drainage been evaluated in the past? ☒ Yes** ☐ No If yes, please identify documentation:

Master Drainage Study, Update #1-3 for Kyle Canyon (SHG, DS4420)

Master Drainage Study for Kyle Canyon (GCW, DS4091)

7. If known, please briefly identify the proposed discharge point(s) of runoff from the site:
Intersections of Log Cabin, O'Hare, Iron Mountain, Brent and Horse along Fort Apache Road
Moccasin (New MPU Alignment) toward Upper Las Vegas Wash
U.S. Highway 95 right-of-way

8. Briefly describe your proposed schedule for the subject project: N/A

Engineer's Seal

Submit this form as part of the required drainage study to the local entity which has jurisdiction over The subject property. This form may provide sufficient information to serve as the Conceptual Drainage Study.

*Newly Required Field

**Review and concurrence of the Clark County Regional Flood Control District is required

TABLE 1: SUMMARY OF ULTIMATE CONDITION 100-YR FLOW RATES AT PROPERTY DISCHARGE LOCATIONS 7

1 INTRODUCTION

1.1 Project Overview

Olympia Companies is proposing to develop a 1,663 +/- acre master planned community, identified as *Skye Canyon*, and located within the limits of the City of Las Vegas, Nevada (CLV). The master planned development includes residential, mixed-use, commercial, gaming/casino, schools and parks. Also included are major infrastructure roadways and flood control facilities that are to be constructed as part of the master plan to service the individual pods shown on the proposed land plan.

This study represents the 4th update to the *Skye Canyon Master Drainage Study* by SHG (DS4420). The following represents the major changes from the previous approved Master Drainage Study (MDS) that requires this Update #4 Study:

- Clark County Regional Flood Control District (CCRFCD) Master Plan (MPU) facilities in Log Cabin Way east of Skye Canyon Park Drive, including the Log Cabin Detention Basin, are no longer proposed. These facilities are replaced by a newly proposed regional facility in Skye Canyon Park Drive from Log Cabin Way to Moccasin Road, and in Moccasin Road from Skye Canyon Park Drive to the Upper Las Vegas Wash. A MPU Amendment will be processed to show the new regional alignment supported by this Master Drainage Study subsequent to CLV & CCRFCD approval.

- The previous Master Drainage Study included a proposed condition where flows from the west (including Skye Canyon Detention Basin 1 & 2 outfalls) were discharged in the interim condition to existing US 95 culvert crossings at Iron Mountain Road and Brent Lane. These flows are now proposed to follow the ultimate regional facility alignment, crossing US 95 at the Kyle Canyon Interchange and being conveyed to the Moccasin Road facility. Due to this change, there are no longer separate proposed and ultimate conditions for the Master Drainage Study. The ultimate condition facilities within the Skye Canyon development will be constructed with the infrastructure improvements.

- MDS Update #3 conditions of approval were provided by City of Las Vegas (August 15, 2016) and review comments were provided by Clark County Regional Flood Control District (November 4, 2016.) This update addresses those conditions of approval and review comments. The CLV conditional approval letter and the CCRFCD comment letter is included in Appendix A along with relevant responses.

Additionally, the developer has begun construction and/or technical design of the following projects within the Skye Canyon community based on the previous approved Master Drainage Study:

- *Skye Canyon Phase 1* (DS4661), representing the estimated 160 acres bound by Skye Canyon Park Drive, Grand Canyon Drive, Grand Teton Drive, Skye Village Road. Phase 1 infrastructure is complete and homes are currently under construction within this area.
- *Skye Canyon Detention Basin 1* (DS4698), representing the first of two (2) regionally planned detention basins in the west portion of the property, located near the intersection of Grand Teton Drive and Puli Road. This basin is currently in construction and anticipated to be complete by end of August 2017.

- *Skye Canyon Phase 2* (DS4739), representing the estimated 202 acres bound by the southernmost arroyo in the master land plan of the west property, Skye Village Road, Grand Teton Drive, and Sheep Mountain Parkway. The Phase 2 infrastructure and individual subdivisions are currently under construction.
- *Skye Canyon Detention Basin 2* (DS4813), representing the second of two (2) regionally planned detention basins in the west portion of the property, located near the intersection of Iron Mountain Road and Puli Road. This basin is currently in Technical Drainage Study review and anticipated to be begin construction by June 2018.
- *Skye Canyon Phase 3* (DS4796), representing the estimated 202 acres bound by the southernmost arroyo in the master land plan of the west property, Skye Village Road, Grand Teton Drive, Sheep Mountain Parkway. The Phase 3 infrastructure is currently in improvement plan review and anticipated to be under construction in August 2017.

1.2 Study Purpose

The purpose of this study is to provide an updated conceptual hydrologic and hydraulic analysis for the project site in order to protect the property from onsite and offsite runoff in accordance with local stormwater criteria. The study addresses offsite drainage impacts to the project site, establishes onsite drainage patterns and accommodates the allowable discharge restrictions at appropriate downstream locations. The study also assesses the required drainage infrastructure at the conceptual level, which includes an inventory of existing stormwater facilities in the vicinity, as well as recommendations for site specific facilities necessary to control onsite and offsite runoff.

No improvements are proposed by this Master Drainage Study, only conceptual recommendations for future improvements that will be addressed by future individual technical drainage studies.

1.3 Site Description and Entity Coordination

Prior to the beginning of Skye Canyon development, the condition of the majority of the site was undeveloped desert terrain with sparse desert shrub. Several well-defined "arroyos" exist west of U.S. Highway 95. The existing topography generally slopes from west to east at longitudinal slopes that range from 2% to 5%.

For ease of discussion in this study, Skye Canyon has been divided into West and East sections of the site. The divider between the West and East has been selected as U.S. Highway 95.

Sheep Mountain Parkway is now located in a north-south alignment through the West property, traversing from the former Puli Road at the south Skye Canyon boundary to the former Shaumber alignment as it exits the north Skye Canyon boundary toward a future interchange at SR-157 (Kyle Canyon Road). Sheep Mountain Parkway is anticipated to be constructed by others in a 200-ft wide alignment reserved for future CLV use.

Several existing well-defined "arroyos" traverse the West portion of the site that have been determined as "Waters of the Unites States". Note that a current regulatory permit (SPK-2005-50517) received from the United States Army Corps of Engineers (USACE) has

been obtained for 1.8 acres of disturbance to these ephemeral washes. A copy of the current Section 401 and 404 permits have been included in previous submittals.

Various NV Energy easements currently exist throughout the Skye Canyon site. It is the assumption of this study that grading will be allowed in the NV Energy easements, if necessary.

The development of Skye Canyon affects various jurisdictions. As a part of this project, on-going coordination is required with the jurisdictions listed below.

- City of Las Vegas (Skye Canyon development is within CLV limits)
- City of North Las Vegas (CNLV owns/maintains Upper Las Vegas Wash facility in Moccasin Road alignment beginning approximately 2000-ft east of Durango Drive)
- Clark County Regional Flood Control District (Impacts to current MPU facility alignments)
- Nevada Dept. of Transportation (Development adjacent to and discharging into NDOT right-of-way, U.S. 95)
- Clark County Dept. of Public Works (Adjacent to and proposes offsite improvements within Clark County jurisdictional limits)
- USACE and NDEP (Grading of and discharge into "Waters of the United States"). The current permits already obtained in the previous Master Drainage Study remain applicable, and no further coordination with USACE is required at this conceptual planning level.
- Nevada Dept. of Water Resources Dam Safety Board (Proposed detention basins are preliminarily identified as dams). Dam Safety permits will be obtained upon technical design of the proposed detention basins; therefore, no coordination with Dam Safety is required at this conceptual planning level.

1.4 FEMA Flood Zone Designation

Skye Canyon is not located within a FEMA designated Special Flood Hazard Area (SFHA). The site has been identified on the current FEMA FIRM Panel Maps 32003C 1735E, 1745E and 1750E, all dated September 27, 2002. The current FEMA FIRM maps are unchanged from the previous MDS update.

1.5 CCRFCD Facility Information

The current 2013 CCRFCD MPU facilities in the vicinity of Skye Canyon were identified on Exhibit B, included in MDS Update #3. Many proposed and existing regional facilities are located within or adjacent to the site. These facilities were addressed in a *2013 Kyle Canyon Amendment* to the MPU.

The Skye Canyon development is proposing changes to the 2013 CCRFCD MPU, the most notable change being relocation of the proposed MPU facility reach between the US-95 Kyle Canyon Interchange and Moccasin Road. This facility is now proposed in Log Cabin Way and Skye Canyon Park Drive to Moccasin Road. Coordination of changes to the current MPU hydrologic watersheds and regional facility alignments have been performed between SHG, CLV and CCRFCD. Copies of meeting summary notes are included in Appendix E detailing the coordination. A MPU Amendment will be submitted to update the regional facility alignments presented in this Master Drainage Study upon approval of this study from CLV and CCRFCD.

1.6 Reference Studies

As a result of this study acting as Update #4, the previous indicated reference materials remain applicable to this study. Reference information from previous studies, including the existing condition analysis from the previous GCW Master Drainage Study, is unchanged from MDS Update #3.

2 METHODOLOGY

2.1 Compliance

The methodologies utilized in the preparation of this study are in compliance with the Clark County Regional Flood Control District's Hydrologic and Drainage Design Manual (CCRFCD Manual, Reference 2).

2.2 Hydrologic Modeling

Hydrologic methodologies, subbasin delineations and supporting parameters are unchanged from the previous study update. Combination and routing of subbasins at the northeast boundary of the development area are updated to account for the revised regional facility alignment in Skye Canyon Park Drive from Log Cabin Way to Moccasin Drive and east in Moccasin Drive to the Upper Las Vegas Wash.

As discussed in Section 1.1, the ultimate condition facilities within the Skye Canyon development are now planned to be constructed with the infrastructure improvements. The ultimate condition hydrology model has been updated to reflect the new regional facility alignment down Moccasin Road. In addition, updated stage-storage-discharge data has been included from Detention Basin 2 TDS Addendum #2. The updated ultimate condition HEC-1 model is included in Appendix C. Revised ultimate condition hydrology map Exhibits E and F are included in Appendix B.

2.3 Hydraulic Modeling

All hydraulic modeling calculations are unchanged from MDS Update #3, except for the re-aligned Moccasin regional facility and Detention Basin 2 outfall. The facilities updated are referred to on ultimate condition drainage facility map Exhibits J and K by MPU ID's: LVMP (Las Vegas Wash - Moccasin Parallel), MOLC (Moccasin - Log Cabin), LCHU (Log Cabin - Hualapai), and LCIR (Log Cabin - Iron Mountain). Refer to Appendix D for updated hydraulic modeling calculations for these facilities.

3 EXISTING DRAINAGE CONDITION

Existing condition hydrologic modeling is unchanged from the previous study update. For information on hydrologic methodologies and flow rate determinations, refer to Master Drainage Study Update #3.

4 PROPOSED DRAINAGE CONDITION

The Skye Canyon Master Drainage Study Update #3 included a proposed drainage condition concept. The basis of this proposed condition was that the future hydrologic cut-off boundary at Skye Village Road would not be in place in the interim condition. Instead, 1275 cfs was proposed to be perpetuated across this future cut-off boundary and conveyed to multiple existing culverts under US 95 at Iron Mountain Road and Brent Lane. In addition, the downstream facility for the Skye Village Road cutoff (Log Cabin Way) was not proposed to be designed for the ultimate condition flow in the interim condition.

Subsequent to the MDS Update #3 submittal, the developer has proposed to construct the Skye Village Road and Log Cabin Way regional facilities with the Skye Canyon infrastructure improvements. These facilities will be designed as regional facilities for the ultimate condition flow, and provide a 100-year cutoff at Skye Village Road. This facility will then continue across US 95 at the Kyle Canyon Interchange, then east in Log Cabin Way, north in Skye Canyon Park Drive, and east in Moccasin Road to the Upper Las Vegas Wash. Due to these changes, the facilities proposed through the Skye Canyon development area are now identical to the ultimate condition, and therefore a separate proposed condition analysis is no longer warranted.

5 ULTIMATE DRAINAGE CONDITION

5.1 Definition of Ultimate Condition

The ultimate condition considers Skye Canyon fully developed per the Master Land Use Plan which is unchanged from the previous udpate. The offsite drainage areas also are considered in their full build-out state in conformance to the MPU drainage patterns. Note that this Master Study proposes changes to the MPU drainage patterns in the vicinity of its influence. A MPU Amendment will be prepared to demonstrate these changes subsequent to CLV and CCRFCD approval of this study.

The future alignment of Sheep Mountain Parkway has been reserved north-south across the West site, as requested by CLV. During the ultimate condition, it is expected that Sheep Mountain Parkway will be improved. On-going coordination with the engineer for Sheep Mountain will continue and relevant excerpts from the preliminary design that affect drainage patterns are included with MDS Update #3.

MDS Update #3 included ultimate offsite facilities downstream of Skye Canyon Park Drive along the Log Cabin Way alignment, including a proposed detention basin and improvements to facilities associated with the Tule Springs Environmental Detention Basins. These facilities are no longer proposed and have been replaced with a facility north in Skye Canyon Park Drive and east in Moccasin Road to the Upper Las Vegas Wash levee facility.

5.2 Discussion of Ultimate Condition

Ultimate condition hydrology is revised to reflect the downstream offsite facility changes described above. Subbasins and supporting parameters remain the same, but subbasin routings have been revised to model the proposed new facility alignment. Refer to Exhibits E and F, included in Appendix B, for a detailed illustration of the ultimate condition drainage patterns.

Offsite – West

Offsite - West drainage patterns are not changed with this update. For information on these patterns, refer to MDS Update #3.

Skye Canyon – West

Previously, the ultimate condition drainage patterns differed at concentration point WC43, where the proposed condition routed flow east. However, this proposed condition no longer exists, as the ultimate facility in Skye Village Road is proposed to be constructed with the development infrastructure. The storm drain infrastructure in Iron Mountain and Grand Canyon routing the WC43 flows east toward US-95 during the proposed condition is no longer proposed.

Note that the remaining West development east of Skye Village Road remains draining toward US-95 as described in the proposed condition included in MDS Update #3.

U.S. Highway 95

US 95 drainage patterns are not changed with this update. For information on these patterns, refer to MDS Update #3.

Skye Canyon – East

The ultimate condition drainage patterns for Skye Canyon East are generally the same as those with MDS Update #3, with the exception that the new regional facility alignment conveys flow north from Log Cabin/Skye Canyon Park to Moccasin Road, rather than down Log Cabin Way.

Offsite – East

The ultimate condition Offsite – East drainage patterns are changed due to the new regional facility alignment. The new alignment conveys flow north from Log Cabin/Skye Canyon Park to Moccasin Road, then east in Moccasin Road to the Upper Las Vegas Wash levee facility. Offsite regional facilities and modifications previously proposed downstream of Log Cabin Way (Log Cabin DB3, Tule Springs DBs, associated conveyance facilities) are no longer proposed. Flows discharged offsite to street alignments at the east boundary of the site continue to match existing patterns and the City's Northwest Neighborhood Master Plan Study as described in MDS Update #3. A summary of east diversion flow rates is included on Exhibit E in Appendix B.

5.3 Summary of Ultimate Condition Flows

As discussed in Section 5.2, the ultimate regional facility alignment has been revised in the northeast area of the Skye Canyon development. To address the updated flow rates, the flow summary tables on Exhibits E and F in Appendix A are updated.

Instead of comparing to the existing condition, it is the goal of this study's ultimate condition to conform to the CCRFCD MPU, City's Northwest Neighborhood Flood Control Master plan and the existing design of the utilized Horse Interchange RCB facility. Table 5

below summarizes the proposed flow rates in comparison to the allowable flow rates at the pertinent discharge locations to show conformance.

Table 1: Summary of Ultimate Condition 100-yr Flow Rates at Property Discharge Locations

Location	Allowable Q_{100} (cfs)	Ultimate Q_{100} (cfs)	SHG HEC-1 Node	Allowable Reference Material
Eagle Canyon / Egan Crest (Existing Phase 2 Storm Drain)	218	226	WC12	Phase 2 Infrastructure
Eagle Canyon / Skye Village (Existing Phase 1 Storm Drain)	477	485	WC14	Phase 1 Infrastructure
Eagle Canyon / Grand Canyon (Existing Phase 1 Storm Drain)	777	787	WC18	Phase 1 Infrastructure
Skye Village / Skye Canyon Park (Existing Phase 1 Storm Drain)	367	412	WC26	Phase 1 Infrastructure
Iron Mountain @ Skye Canyon Park	235	140	IREAST	Northwest Neighborhood
O'Hare @ Skye Canyon Park	73	47	OHARE	Northwest Neighborhood
Log Cabin @ Skye Canyon Park	187	187	LOGCAB	Northwest Neighborhood
Fort Apache / Brent Lane	178	161	BRENT	Northwest Neighborhood
Fort Apache / Horse Drive	138	151	EC26	Northwest Neighborhood
US-95 MPU Facility @ Culvert 5	329	301	CHD05B	Horse Interchange
US-95 MPU Facility @ Culvert 6	653	648	CHD06B	Horse Interchange
US-95 MPU Facility @ Culvert 11	1,715	1,836	CPCULV	Horse Interchange
US-95 MPU Facility – S. of Grand Teton	2,332	2,285	95STH	MPU

After review of Table 1, it is concluded that the ultimate condition flow rate exceeds the allowable flow rate at the following locations:

- Eagle Canyon / Egan Crest, Skye Village & Grand Canyon (Existing Phase 2 Storm Drain)
- Skye Village / Skye Canyon Park (Existing Phase 1 Storm Drain)
- Fort Apache / Horse Drive
- US-95 MPU Facility @ Culvert 11

No change to these flow rates occurs with this update. The acceptability of these increases was detailed in MDS Update #3, and is reiterated below:

Eagle Canyon / Egan Crest, Skye Village & Grand Canyon (Existing Phase 2 Storm Drain): Although the flow rate is higher at this location, it is internal to the developer's property and at the discharge point toward downstream offsite property the proposed peak flow rate is returned to not exceed existing condition.

Note that the flow rate is only slightly larger than the allowable design rate and Phase 2 has not been permitted to begin construction. A future Technical Drainage Study Update will be prepared to show the new Master Drainage Study impacts to Phase 2. However, due to its slight nature, it is anticipated that this increase in flow rate is considered acceptable.

Skye Village / Skye Canyon Park (Existing Phase 1 Storm Drain): Although the flow rate is higher at this location, it is internal to the developer's property and at the discharge point toward downstream offsite property the proposed peak flow rate is returned to not exceed existing condition.

It is acknowledged that the increase in flow rate impacts existing storm drain infrastructure constructed with Phase 1. The existing storm drain profile has been hydraulically modeled in Appendix E with WSPG modeling software to show that the existing storm drain still meets CCRFCD criteria. It is also acknowledged that the storm drain is currently blocked from receiving the major flow contribution from the east, only presently constructed as a short portion of conduit, and the downstream extension of this trunk line will be modeled in the future utilizing the higher flow determined in this study.

Fort Apache / Horse Drive: It is acknowledged that the ultimate condition flow rate at this intersection is slightly larger than the allowable. The 13 cfs increase is attributed to this study showing a larger flow rate of 70 cfs ("SOUTH") splitting from EC25 to Concentration EC26 that the Northwest Neighborhood Master Plan had planned for 52 cfs in the same split. However, it was proven with Detention Basin 1 that the 18 cfs increase to 70 cfs in the "SOUTH" storm drain split does not adversely impact the existing storm drain. Therefore, the flow rate increase is acceptable.

US-95 MPU Facility @ Culvert 11: It is acknowledged that the increase in flow rate impacts the existing Horse Interchange RCB. The existing storm drain profile has been hydraulically modeled in Appendix G with WSPG modeling software to show that the existing storm drain contains the increase in flow rate meeting CCRFCD criteria.

Although an increase occurs in this location of the US-95 MPU Facility, the flow rate returns to less than allowable after the next contribution to the RCB at Grand Teton. Also the upstream flow rates are anticipated to not exceed allowable, as evidenced by the flow rates totaled at Culverts 5 and 6. Therefore, the impacts are contained within a short reach of facility.

5.4 Summary of Ultimate Condition Drainage Infrastructure

Refer to Exhibits J and K, included in Appendix B, for an illustration and the location of the conceptual ultimate condition flood control facilities. Updated conceptual hydraulic computations have been included in Appendix D for Skye Canyon West, East and Offsite, respectively.

Offsite – West

Offsite - West drainage patterns are not changed with this update. Refer to MDS Update #3 for discussion.

Skye Canyon West

Detention Basins and Regional Facilities: Refer to MDS Update #3 for detailed description of detention basins. West detention basins and regional facilities are unchanged in this update with the exception of stage-storage-discharge data for Detention Basin 2. This data has been updated in the ultimate condition HEC-1 model and results are included in Appendix C. Summary table of results are updated in Exhibits E, F, J and K in Appendix B. Updated conceptual facility sizing hydraulic calculations are included in Appendix D.

Local Storm Drain, Sheep Mountain Parkway, Existing Arroyos: No changes are proposed to these facilities with MDS Update #4.

Skye Canyon East

Regional Facilities: The regional facility alignment previously proposed down Log Cabin Way has been revised. From Log Cabin Way/Skye Canyon Park Drive, the facility now conveys flow north in Skye Canyon Park Drive to Moccasin Road, then east in Moccasin Road to the Upper Las Vegas Wash levee facility. The revised regional facility routing has been updated in the ultimate condition HEC-1 model and results are included in Appendix C. Summary table of results are updated in Exhibits E, F, J and K in Appendix B. Updated conceptual facility sizing hydraulic calculations are included in Appendix D.

Local Storm Drain, Open Channels: No changes are proposed to these facilities with MDS Update #4.

Offsite East

Regional Facilities: The new regional facility alignment conveys flow north from Log Cabin/Skye Canyon Park to Moccasin Road, then east in Moccasin Road to the Upper Las Vegas Wash levee facility. Offsite regional facilities and modifications previously proposed downstream of Log Cabin Way (Log Cabin DB3, Tule Springs DBs, associated conveyance facilities) are no longer proposed. The revised regional facility routing has been updated in the ultimate condition HEC-1 model and results are included in Appendix C. Summary table of results are updated in Exhibits E, F, J and K in Appendix B. Updated conceptual facility sizing hydraulic calculations are included in Appendix D.

Flows discharged offsite to street alignments at the east boundary of the site continue to match existing patterns and the City's Northwest Neighborhood Master Plan Study as described in MDS Update #3. A summary of east diversion flow rates is included on Exhibit E in Appendix B.

6 CONCLUSIONS & RECOMMENDATIONS

1. Skye Canyon Master Drainage Study Update #4 is being submitted to revise the regional storm drain facility alignment and respond to CLV conditions of approval and CCRFCD review comments from MDS Update #3. The proposed alignment of the regional facility discharging from the east side of the site has been moved from Log Cabin Way to Moccasin Road. In addition, Skye Village Road, on the west side, is now a 100-year flow cutoff both in the proposed and ultimate conditions. This cutoff will eliminate the offsite flows from west of Skye Village Road that were proposed to be perpetuated toward US 95.

2. Skye Canyon proposes regional facilities and a new MPU alignment of facilities and hydrologic basins as coordinated with CCRFCD. Therefore, an MPU Amendment is required to support these items upon approval of MDS Update #4.

3. Skye Canyon development affects various jurisdictions. Therefore, on-going coordination is required with the following entities:

    - City of Las Vegas Public Works
    - City of North Las Vegas Public Works
    - Clark County Regional Flood Control District
    - Clark County Department of Public Works – Development Review
    - Nevada Department of Transportation
    - U.S. Army Corps of Engineers and Nevada Dept. of Environmental Protection
    - Nevada Division of Water Resources – Dam Safety Board

APPENDIX A

Review Comment Letters and Responses

Responses to CLV 08/15/2016 MDS Update #3 Conditions of Approval

The following are conditions of approval contained in the August 15, 2016 conditional approval letter received from City of Las Vegas (CLV) regarding the above referenced project. A copy of the CLV conditional approval letter is included in Appendix A for reference. The following comments have been individually addressed:

1. **Comment:** *The overall concept presented in the Master Plan Update #3 for Skye Canyon appears to satisfy the intent of providing regional connectivity of proposed Master Planned facilities without impacting the National Monument. Specific Technical Drainage Studies shall be required to address the specific impacts of each proposed Master Planned facility and the interaction with proposed facilities needed for each phase of development.*

   Response: The comment requiring specific technical studies is acknowledged.

2. **Comment:** *The Regional Flood Control District has requested that engineering consultants utilize the latest NRCS soils data as a part of the drainage study parameters. The Master Plan Update shall discuss the soil data used in the analysis and discuss the impacts on the overall hydraulic analysis. Provide an updated HEC-1 analysis and address local and MPU facility size modifications, if necessary based upon the revised Soil Survey data. Update the NRCS soils data in the References (Section 7). Review and revise Exhibit & Figures accordingly. This needs to be addressed as supplemental information prior to the MPA approval.*

   Response: A current soils report has been obtained from the NRCS Soil Data Mart (http://websoilsurvey.sc.egov.usda.gov/App/HomePage.htm) and these updated soil boundaries have been overlaid on the study's soils map, Exhibit A included in Appendix B, to demonstrate any changes in the soils utilized in hydrologic analysis. The methodologies for selecting curve numbers utilized in this study had observed the predominant soil group in each type and choose the appropriate curve number based on proposed land use from CCRFCD Manual tables. The below table represents a comparison of the soil groups presented in the approved study and the soil groups represented by the current NRCS soil survey in Appendix B.

Comparative Summary of Hydrologic Soil Groups			
Previous Soils Data		**Current Soils Data**

191	B	191	A
400	D	400	D
540	B	314	A

Inspection of the revised Exhibit A reveals that Soils 155 and 400 have remained the same boundary and predominant soil group; therefore, it is anticipated little to no change occurs to the hydrologic analysis presented by this study. The previous Soil 191 that comprises a small portion in the very far southwest corner of the site remains the same type but has changed to an improved hydrologic soil group "A' from the previous 'B' type. The previous Soil 540 that encompasses a majority of the east half of Skye Canyon, has been changed to Soil 314 which is considered a new soil type; however, its predominant soil group of 'A' allows for a better drainage class than the previous hydrologic group of 'B' for the same

area. The Weiser portion of the composition has been re-defined to the lower 'A' hydrologic soil group. After further review of the soils composition between the two surveys, there are characteristics of the former 540 soil that are similar to the newly described 314 soil such as its alluvium formation and its sandy loam make-up that would allow for a well-drained drainage class. The new 314 soil composition shows that the restrictive layer is almost 6.5-ft deep before it can impede drainage and is described as "very rarely flooded". In conclusion, the change to 'A' soil per the new soil survey is considered acceptable; 'A' group, creates a hydrologic condition where storm runoff will not increase and in most cases improve or lessen the runoff computed by the analyses in this study.

Through the above summary table and discussion, it is concluded that it is not necessary for this Master Drainage Study to revise its hydrologic and hydraulic analyses. It is also noted upon technical studies, that the new soils will be considered and may be utilized for design purposes. Additionally, the technical studies addressing the regional detention basin improvements for updated Detention Basin 1 (DS4698) and Detention Basin 2 (DS4813) include the new soils information in hydrologic design. The soil data update has also been discussed with CCRFCD and this approach of providing justification is acceptable to them.

3. **Comment:** *The Master Plan shall clearly define when the proposed interim facilities will be taken out of service and the construction of the required MPU facilities. A complete Phasing Plan shall be updated and approved by the City of Las Vegas and Regional Flood Control prior to the approval of the MPA.*

   Response: It is the developer's plan to construct the ultimate condition MPU facilities shown on Exhibits J and K from Skye Village Road/Iron Mountain Road to Moccasin Road/Upper Las Vegas Wash. The Moccasin Road reach will be constructed by the City of Las Vegas, per the approved Development Agreement between the City and Skye Canyon, see excerpt in Appendix E. Due to the updated plan of constructing the ultimate MPU facilities with the infrastructure improvements, there are no longer interim facilities proposed in place of ultimate facilities. Exhibit O included in Appendix B shows the updated phasing plan for the improvements.

4. **Comment:** *This Update proposes to construct the Log Cabin Detention Basin #3 with flows that will increase the runoff volume routed towards the Tule Springs North Environmental Detention Basin (TSNEDB). The engineer proposes to modify the TSNEDB by removing the orifice plate at the detention basin outfall pipe to increase the outflow. Detention basin design uses the orifice plate to ensure that the basin outfall remains under inlet control parameters per the HCDDM, Section 1200. Discuss the impact of removing the orifice plate and provide calculations verifying that the existing outfall will convey the proposed 78 cfs under inlet control conditions. Discuss the drain time impacts to the TSNEDB and the impacts to the downstream development. Alternatively, the TSNEDB may need modifications to meet the HCDDM requirements. This could include the expansion of the TSNEDB basin to increase the storage volume accordingly or replacement of the TSNEDB outfall. These or other modifications need to be conceptually addressed as supplemental information prior to the MPA approval.*

Response: As discussed in comment response #3 above, regional facilities are no longer proposed to discharge down Log Cabin Way with the Skye Canyon improvements. Impacts to TSNEDB are no longer anticipated, and no modifications to it are proposed.

5. **Comment:** *The premise of the Master Plan Update #3 for Skye Canyon is to add two (2) new CCRFCD Master Plan Detention Basins that are located outside of the Skye Canyon development. The City of Las Vegas is in the process of applying for BLM grants for these detention basin sites. These ultimate facilities shall be included in the MPA as CCRFCD facilities. The intent of the Detention Basin (157DB) is to reduce developed flows to maintain the existing condition flow rate in the ultimate condition and reduce the size of the downstream regional facilities. The intent of the Log Cabin Detention Basin (DB3) is to reduce developed flows to reduce the size of the downstream regional facilities that impact the TSNEDB. The concept for the addition of these two detention basins to the CCRFCD Master Plan is acceptable and will require the submittal of technical studies to refine the facility parameters. The construction of DB3 shall be the responsibility of the Skye Canyon development and will be of sufficient size to reduce the flow impacts to development downstream and ultimately the TSNEDB.*

   Response: The comment is acknowledged. The intent of the detention basin 157DB, as stated in the comment, is correct. Detention basin DB3 is no longer proposed as discussed in comment response #3 above.

6. **Comment:** *This Master Study notes that drainage study updates for both Phase 1 and Phase 2 to accommodate the increased system flows impacting these Phases are necessary. A detailed analysis & review of the required updates will determine the system impacts and if any needed system upgrades are necessary to maintain HCDDM criteria.*

   Response: The impacts the Master Drainage Study has on downstream Phase 1 and Phase 2 infrastructure, currently existing or under review, have been addressed in DS4739E, *Technical Drainage Study Update #2 for Skye Canyon – Phase 2 Infrastructure.*

7. **Comment:** ***Exhibit 1****: The developed condition Exhibit 1 shall be updated to include the coordinated Kyle Canyon Interchange drainage improvements. The size of the downstream facilities shall be reviewed based upon the interchange improvements.*

   Response: The ultimate condition onsite drainage facilities Exhibit J has been updated to reflect the storm drain size and alignment concepts presented in the Hydraulic Supplement that SHG prepared for the Kyle Canyon and US 95 Interchange project. The concept's summary exhibit and preliminary storm drain profiles have been included in Appendix E for reference.

8. **Comment:** ***Exhibit 1****: The developed condition Exhibit 1 shows that a portion of the developed flows will drain north of Moccasin into the BLM land and the National Monument to mimic existing drainage patterns. Concentrated flow discharges to the north shall require BLM and National Park Service concurrence.*

   Response: The north boundary along the Moccasin alignment is encompassed by a 300-ft power easement with additional 50-ft of right-of-way beyond. Per the Development Agreement excerpts in Appendix E, this area will remain largely undisturbed with no roadways or obstructions to prevent the developer from returning flows north onto the BLM land in their historic manner. Also shown in this study is that the property will not be

increasing peak flow rates or runoff volume onto the BLM land. In conclusion, it is determined that BLM and National Parks concurrence is not required for this study as currently presented due to perpetuation of existing flow rates, volumes and patterns

9. **Comment:** ***Exhibit J:*** *The proposed facility 14 that drains from EC18 easterly to the proposed DB3 shall be a permanent facility meeting the requirements of Title 20 and shall be constructed as a permanent MPU facility with this development.*

   Response: As discussed in comment response #3 above, regional facilities are no longer proposed to discharge down Log Cabin Way with the Skye Canyon improvements.

10. **Comment:** ***Exhibit J:*** *The proposed onsite DB1 & DB2 facilities shall include the collection facilities as a part of the detention basins areas.*

    Response: The technical designs of Detention Basin 1 (DS4698) and Detention Basin 2 (DS4813) includes the collector channels that routes storm runoff from south to north into the storage areas. These facilities are identified as 'XC5', 'D6', 'D6-1' and 'D6-2' and annotated appropriately on Exhibit J.

    Note that Facility '50' is considered a future facility to be required upon construction of Sheep Mountain Parkway in this area to properly determine locations, elevations and adjustments to the right-of-way grant from BLM. These facilities are deferred to the design of the Grand Teton interchange with Sheep Mountain by separate party, not the Skye Canyon master developer. Until design of the Grand Teton Interchange occurs, Facility 'XC5' constructed with Detention Basin 1 is considered permanent and effectively provides the hydrologic boundary required for flood protection of the downstream Skye Canyon area.

11. **Comment:** ***Exhibit J****: The proposed changes to DB1 will impact the alignment and size of the ultimate collection facility that drains to DB1. The proposed facility shall remain an open channel to allow flow interception from the west in this undeveloped drainage.*

    Response: Exhibit J has been adjusted to show the changed alignment of the collector channel, Facility 'XC5'. Facility 50 has been adjusted to a future open channel to be constructed by others as described above in Response to Comment No. 10.

12. **Comment:** *The* ***Master Land Use Plan*** *has been provided however, any further changes to the adopted Master Land Use Plan shall require a complete update to the Master Drainage Study.*

    Response: The comment is acknowledged.

13. **Comment:** *A copy of the approved 404 Permit from the Army Corps of Engineers has been provided.*

    Response: The comment is acknowledged. On-going coordination with NDEP to fulfill 401 permitting requirements will continue.

14. **Comment:** *The Phasing Plan for Phase 1 & 2 have addressed the interim condition and associated downstream impacts to address the impact of the long term discharge from the outfall of the Detention Basin #1. This includes upgrading the existing storm drain system*

near the intersection of Brent Lane and Fort Apache. These improvements have been included in the Detention Basin #1 improvements.

Response: The comment is acknowledged. The facilities proposed in Brent Lane to mitigate long term discharge impacts are currently in construction. For additional information, refer to Detention Basin 1 plans (H#60604).

15. **Comment:** *Flood Control requires an interim condition drainage analysis in support of the Phasing Plan that clearly shows the impacts to each Phase, existing washes, upstream concentration points and the downstream concentration points. Flood Control needs to make sure that each Phase of Development is protected during the interim and full build-out of this overall project. The current Phasing Plan does not adequately address these issues beyond Phase 2.*

    Response: Each phase of improvements will specifically address interim condition hydrology and hydraulics with technical studies related to the associated drainage infrastructure required to provide flood protection for those improvements.

16. **Comment:** *The interim conditions of the Phasing Plan need to address the impact of the long term discharge from the outfall of any future detention basins. It is noted that Only Detention Basin #1 has been reviewed. The technical review of Detention Basin #2 will determine the impacts downstream along the Iron Mountain Road alignment and/or other needed facilities to mitigate that impact. The provided Basin Attenuated Outfall Exhibit is only conceptual in nature and is subject to further review as a part of the technical reviews. Existing flow conditions do not have a drawn out discharge from a detention basin. This discharge impact must be accounted for in the interim condition without negatively impacting the existing downstream neighborhoods.*

    Response: The comment is acknowledged. Note that the technical study for Detention Basin 2 (DS4813), currently under review, proposes to discharge to the regional facility in US 95 to avoid impacts to existing downstream neighborhoods.

17. **Comment:** *CCRFCD concurrence has previously been provided. A new concurrence for Update #3 shall be provided from CCRFCD after Conditional Approval by the City of Las Vegas.*

    Response: CCRFCD concurrence requirement is acknowledged.

18. **Comment:** *CCPW concurrence has previously been provided. A new concurrence for Update #3 shall be provided from CCPW after Conditional Approval by the City of Las Vegas.*

    Response: CCPW concurrence requirement is acknowledged.

19. **Comment:** *NDOT concurrence has previously been provided. A new concurrence for Update #3 shall be provided from NDOT after Conditional Approval by the City of Las Vegas.*

    Response: NDOT concurrence requirement is acknowledged.

The following comments are repeated until they are complete:

1. **Comment:** *Please note that the Traffic Study must be approved prior to final approval of the Master Drainage Study. If the street layout does not match the Master Drainage Study, an update to the Master Drainage Study must be submitted to address the changes.*

   Response: Acknowledged.

2. **Comment:** *Per a meeting held in August 18, 2011 between the developer and the City of Las Vegas, it was agreed that NV Energy's approval of any proposed drainage facilities within their access easements (such as the proposed detention basins) must be obtained prior to the final approval of the Master Drainage Study. Please provide documentation for such approval or acknowledgment.*

   Response: Each individual improvement that has impacts on NV Energy will receive NV Energy review and approval for permitting.

3. **Comment:** *Please note that any future technical drainage study submittals that differ from the Master Drainage Study (ie. Changes in pods, infrastructure, flows etc.) will require an update to the Master Drainage Study and this update must be approved by the City of Las Vegas Flood Control Section prior to final approval of technical drainage study.*

   Response: Acknowledged.

4. **Comment:** *The proposed detention basins will require coordination with the State of Nevada, Division of Water Resources Dam Safety and will require the State's approval prior to permitting.*

   Response: Acknowledged.

5. **Comment:** *Please note that the proposed 100-year flood protection facilities identified on Exhibit J must be constructed by the Master Developer as a part of the master planned infrastructure. Technical drainage studies are required for each phase of the master planned infrastructure improvements. The technical drainage studies for the infrastructure improvements may be submitted with conditional approval of this Master Drainage Study. However, final approval for the Master Drainage Study must be obtained prior to conditional approval of the infrastructure drainage studies.*

   Response: Acknowledged. Note that Moccasin Road facilities will be funded per developer agreement with City.

6. **Comment:** *Technical drainage studies are required for each of the Pod's. The technical drainage studies for the Pod's may not be submitted until the conditional approval of the pertinent infrastructure drainage study is obtained. Final approval for the infrastructure drainage study must be obtained prior to conditional approval of the impacted Pod drainage studies.*

   Response: Acknowledged.

7. **Comment:** *Building permits for the homes within the individual Pod's will not be issued until construction of the street and flood control infrastructure around the Pod is substantially complete or interim protection is provided per the approved technical drainage study.*

   Response: Acknowledged.

8. **Comment:** *The design of debris basins at all major culvert entrances to limit the amount of sediment and debris entering the storm drain facilities will be required in a future infrastructure study.*

   Response: Acknowledged.

9. **Comment:** *Please note that all detention basins must be designed per CCRFCD criteria including a low flow facility around the detention basin.*

   Response: Acknowledged.

10. **Comment:** *Please note that all proposed interim facilities must be maintained by the master developer.*

    Response: Acknowledged.

11. **Comment:** *Provide a legal description of the proposed detention basins prior to recordation of the parent final map.*

    Response: Acknowledged.

12. **Comment:** *Coordinate the proposed drainage facilities with Sheep Mountain Parkway project. Please contact Greg McDermott, P.E., at 702-229-2143 to coordinate the proposed drainage facilities.*

    Response: Acknowledged.

Responses to CCRFCD 11/04/2016 MDS Update #3 Review Comments

The following are comments contained in the November 4, 2016 comment letter received from Clark County Regional Flood Control District (CCRFCD) regarding the above referenced project. A copy of the CCRFCD comment letter is included in Appendix A for reference. The following comments have been individually addressed:

1. **Comment:** *The proposed facilities identified in this Master Drainage Study impacts the North and South Environmental Enhancement Area (Detention Basins). The Engineer states that the peak outflow from the North Environmental Enhancement Area increases from 30 cfs to 80 cfs and the drain time increases from 2 days to 7 days. Provide a comparison between the existing and proposed condition design parameters of the detention basins. Provide pertinent design reference materials of the existing detention basins and provide calculations justifying that the proposed modifications meet District criteria and State Dam Safety requirements. Address permitting process for any modification to the detention basins. Address any impacts and mitigation measures.*

   Response: It is the developer's plan to construct the ultimate condition MPU facilities shown on Exhibits J and K. These facilities are now proposed to convey regional flows down Moccasin Road to the Upper Las Vegas Wash rather than down Log Cabin Way toward the North Environmental Enhancement Area. Due to this change in regional facility alignment, no significant impacts to the North and South Environmental Enhancement Areas are anticipated.

2. **Comment:** *Provide a detailed impact analysis to the Silverstone Ranch Golf Course in the interim and ultimate conditions based on the modifications proposed with the North Environment Enhancement Area. The analysis must be provided in this Master Drainage Study instead of deferring to the Master Plan Amendment.*

   Response: See response to Comment #1. Due to the change in regional facility alignment, no significant impacts to the Silverstone Ranch Golf Course are anticipated.

3. **Comment:** *Log Cabin Outfall/Exhibit K:*
   a. *Facility 52 (72" RCP) is identified as an "onsite CCRFCD Regional facility". The adjacent downstream facility, Facility 43, is identified as a "future CCRFCD Regional facility (By Others)". Facility 52 will be constructed with the Skye Canyon development and the flow will be discharged at a concentrated point and may impact the existing Floyd Lamb Park at Tule Springs. To ensure connectivity of the outfall pipe from the Log Cabin Detention Basin, Facility 43 must be constructed concurrently with Facility 52. Revise exhibits accordingly.*
   b. *Facility X22 is labeled as an "Existing CCRFCD Regional Facility". This is not identified as an existing Regional facility on the Master Plain Update (MPU). Clarify and revise description accordingly.*
   c. *Discuss the purpose of Facility D6. It appears that D6 will be diverting flow to the South Environmental Enhancement Area. Address impacts accordingly.*

   Response: See response to Comment #1. Due to the change in regional facility alignment, these facilities are no longer proposed. Existing facility X22 is revised on Exhibit K to be shown as a local facility.

4. **Comment:** *It is noted in the Engineer's response to comments that the construction of the Log Cabin Detention Basin (DB3) is proposed with the Skye Canyon development. However, DB3 is shown as a "future CCRFCD regional facilities (by others)". Verify and revise accordingly.*

   Response: See response to Comment #1. Due to the change in regional facility alignment, this facility is no longer proposed.

5. **Comment:** *Based on District's discussion with City of Las Vegas, the limits of Log Cabin Detention Basin may increase in the ultimate condition. The Engineer must coordinate with City of Las Vegas for limits of Regional facilities in the ultimate condition.*

   Response: See response to Comment #1. Due to the change in regional facility alignment, this facility is no longer proposed.

6. **Comment:** *There are three detention basins identified on the MPU along the west boundary of the Skye Canyon development (MOHU0186, MOST0060 and MOIR0098). This update eliminates the middle detention basin (MOSR0060) and the offsite flow is routed from the west to the north along a proposed trapezoidal channel to Detention Basin 2 (DB2 on Exhibit J). Address debris mitigation and sediment impacts to DB2. Provide a discussion regarding the capacity of the DB2 to accommodate the additional tributary area.*

   Response: The 3 detention basins along the west boundary were combined into 2 detention basins as shown in this study by MDS Update #1 that received CLV approval and CCRFCD concurrence in March 2015. Debris volume is provided in the total storage volume provided by DB2 as shown on this study's summary tables on Exhibits J, with a collector open channel provided to transfer the debris and sediment to the basin. The proposed outlet for DB2 has been relocated to the middle of the basin, to prevent clogging from sediment from the two major inflows at the north and south ends of the basin. The HEC-1 models and drainage maps previously provided show the accommodation of the tributary area to DB2.

   The future MPU Amendment for the project will address the reduction from 3 detention basins to 2, as described in Response to Comment No. 12.

7. **Comment:** *The project proposes multiple detention basins in series. Typically, detention basins designed in series have been found to be less efficient based on the District's experience. Address hydrologic models for multiple storm centering impacting the detention basins to ensure the downstream properties are properly flood protected. Discuss interim conditions during construction of Regional facilities.*

   Response: See response to Comment #1. Due to the change in regional facility alignment, Log Cabin Detention Basin 3 is no longer proposed. This reduces the number of detention basins in series. However, storm centering analysis of the watershed has still been performed. Since the watershed is entirely within the SDN3 storm area, the storm centering that would result in the highest downstream flow rate is a storm centered over a drainage area downstream of Facilities DB1, DB2 and DB157. This storm centering reduces the drainage area to Skye Canyon Park Drive / Moccasin Road from 6.17 square miles to 2.53 square miles. An adjusted ultimate condition HEC-1 model for this storm centering has been included in Appendix F. A comparison table of full watershed versus storm centered flow rates is included below.

Comparison of Ultimate Condition Flow Rates (Storm Centering Evaluation)		
Location	**Full Watershed Q_{100} (cfs) [Drainage Area (square miles)]**	**Storm Centered Watershed[1] Q_{100} (cfs) [Drainage Area (square miles)]**
WC43	1325 [2.18]	1303 [0.73]
WC44B	2110 [4.95]	1897 [1.31]
EC1	2386 [5.16]	2199 [1.52]
EC18	2685 [5.67]	2400 [2.03]
EC21	3039 [6.17]	2821 [2.53]
EC27	3239 [6.37]	3029 [2.73]
EC28	3312 [6.52]	3107 [2.88]
1 – Storm centered watershed is downstream of DB1, DB2 and 157DB.		

The above peak 100-year flow rates generated by a centered storm at all pertinent locations that would affect facility sizing are either similar or less than the full watershed hydrologic model. Therefore, storm centering has no impact on the master drainage plan as presented in this study.

8. **Comment:** *For clarification, on Exhibits J & K, indicate on the legend description which facilities must be constructed by the Skye Canyon development and which facilities will be constructed by the Skye Canyon development with District funding contribution. Clarify the "future CCRFCD regional facilities (by others)" as it relates to funding responsibility*

   Response: Exhibits J and K have been adjusted to show the proposed CCRFCD regional facilities east of Skye Canyon Park Drive as color orange, or constructed by the City in accordance with the Skye Canyon Development Agreement. Facilities shown in yellow on the exhibits remains designated proposed regional facilities to be constructed by developer funding only. The magenta color remains designation for future regional facilities constructed by others through use of separate funding measures.

9. **Comment:** *The Skye Canyon Master Drainage Study Exhibits K and J do not match. Facilities at EC7 and EC8 are shown as "proposed local facilities" in Exhibit K and "onsite CCRFCD regional facilities" on Exhibit J. Additionally, facility linework is missing from one exhibit to the other along US95 at Eagle Canyon, along with CCP4.*

   Response: Exhibits J and K have been updated to have facilities and their color identifier match between the two exhibits. Note that the facilities near EC7 and EC8, referred to in the comment, are identified as proposed CCRFCD regional facilities to be constructed by the developer.

10. **Comment:** *Exhibit J:*
    a. *It appears that Facility 9 traverses several parcels. Provide discussion on the chosen alignment and construction impacts to US-95.*
    b. *Exhibit J refers to Exhibit M for Future MPU Facility "MOKC", however exhibit M shows proposed conditions at the Bilbray Elementary School. Additionally, provide discussion on alignment of facility MOKC. Clarify and revise accordingly.*

c. *It does not appear that certain facilities have adequate capacity to convey the design flow or do not match table descriptions. For example, Facility 11, 12, 13a, and 13b are shown as 72" RCP conveying flows in excess of 2,500 cfs. Verify all facility capacity, summary tables and table descriptions and revise accordingly.*

Response:

a. The alignment of Facility 9 is acknowledged. Coordination with the City and NDOT was performed by SHG to establish the ultimate regional alignment as it egresses from US-95. SHG provided that the alignment shown on Exhibit J is preferred by the developer presently with a 13-ft wide by 6-ft high RCB conceptual design, which would require the dedication of a future public drainage easement across the private property. However, to ensure no adverse impacts to US-95 in the event a drainage easement across private property is not available, SHG provided an alternative alignment that resulted in a 13-ft wide by 8-ft high RCB conceptual design that was contained to the existing NDOT right-of-way. The NDOT acceptance letter for this Master Drainage Study included in Appendix A, alludes to the 13-ft by 8-ft conceptual size requirement. Therefore, the Kyle Canyon Interchange project has identified that it will construct the 13-ft by 8-ft size under US-95 highway to optimize its flexibility in the future depending on the egress alignment. For conceptual purposes, this study's Exhibit J has maintained Facility 9 in its alignment and 13-ft by 6-ft size through the private owned property.
b. The annotation referring to the exhibit that shows detail of the upstream regional alignment in SR-157 Kyle Canyon Road was mislabeled. Exhibit J has been updated to refer to Exhibit L.
c. Exhibit J has been revised to show appropriate RCB sizes for the regional facility alignment in Log Cabin east of US-95.

11. **Comment:** *For clarification, provide exhibit(s) identifying which facilities will be constructed with each phase of the Skye Canyon development*

Response: Exhibit O, included in Appendix B, has been prepared that shows which facilities are required to provide a shadow of protection for the current phases of the property. Note the facilities shown on this exhibit are taken from the ultimate condition as the facilities proposed by this development, regional and local, by way of developer only funding or cost sharing.

12. **Comment:** *This update to the Master Study will require an Amendment to the Master Plan. The District requests an annotated F-Map for all proposed facilities with the Skye Canyon development. Provide discussion on preliminary sizing calculation of proposed District facilities*

Response: Exhibits J and K, included in Appendix H, have been labeled with the appropriate new and/or affected MPU branch for planning purposes as agreed to in the November 15, 2016 meeting with CCRFCD. Any MPU reach label shown on the exhibit are those that are anticipated to be addressed in the future MPU Amendment.

The regional facilities within the influence of Skye Canyon follow a different alignment than proposed in the MPU; therefore, it is anticipated that renaming of the regional alignments will occur in the future MPU Amendment. The primary conveyance corridor is now Log Cabin Way to Skye Canyon Park Drive to Moccasin Road to the Upper Las Vegas Wash. As such, the naming of regional facilities is proposed to begin with prefix 'MOLC' (Moccasin - Log Cabin) and 'LVMP'

(Las Vegas Wash - Moccasin Parallel). Future coordination with CCRFCD is anticipated to allow for the current re-naming shown in this study.

13. **Comment:** *It is noted that several proposed pipes and concrete boxes have velocities in excess of 25 fps and over 44 fps. Per Section 802.2 of the District's Hydrologic Criteria and Drainage Design Manual (HCDDM), the maximum velocities in all storm drains shall be limited to 25 fps. Address impacts to joints, manholes, and junctions in the proposed storm drain facilities. It is noted the excessive velocities and specific site conditions for the Skye Canyon development relating to the proposed pipes and concrete boxes may require locking manhole covers or grated covers based on the HGL and the final grade of the project site. Note the Technical Drainage Studies for these developments should address the hydraulic in detail and provide any changes in design to meet the HCDDM.*

    Response: The potential for high velocities in storm drains are acknowledged due to the steep terrain which exists across the property. Several techniques to control and protect against adverse erosive impacts to the conduits are available, and each facility will be evaluated on a case-by-case basis during the technical design process. For the Master Drainage Study level, the facilities shown on the exhibits are effective in outlining the routing required to match hydrologic patterns.

14. **Comment:** *Address erosive potential at all outlets and earthen channels to ensure public safety and clarify rip rap calculations. For example, the summary report table for Open Channel 3 shows 8.83 fps but the rip rap sizing calculations shows 8.2 fps.*

    Response: Individual technical studies that propose storm drain outlets and/or open channels for conveyance will address erosion mitigation as necessary to meet CCRFCD criteria. Note that Facility 'D3' was erroneously analyzed with the wrong flow rate, its location being in Sheep Mountain downstream of the cut-off from Detention Basin 1. An adjusted calculation for Facility 'D3' has been included in Appendix D.

    The other earthen channel previously shown with an erosive velocity was Facility 'EC19'; however, that facility is no longer part of the Master Drainage Study and is deleted.

15. **Comment:** *Clarify the flow direction of the existing concrete u-channel along the Bonita Vista alignment (above facility 42) on Exhibit K. Address impacts to the project site and downstream properties*

    Response: Several high points and flow directions exist along the existing local concrete u-channel. Additional detail has been provided on Exhibit K to better represent the drainage patterns. The regional facility alignment downstream of the development has been moved from Log Cabin Way to Moccasin Road. As a result, existing flow patterns are now perpetuated in Log Cabin Way downstream of Skye Canyon Park Drive, and therefore there are no longer impacts associated with the Bonita Vista concrete u-channel.

CITY OF LAS VEGAS INTER-OFFICE MEMORANDUM				DATE: August 15, 2016
TO: Land Development Services Department of Public Works				FROM: Oh Sang Kwon, P.E. Flood Control Section Department of Public Works
SUBJECT:	Drainage Study for:			COPIES TO:
Skye Canyon Master Drainage Study – Update #3				Slater Hanifan Group

REMARKS: **11th Submittal: Update # 3 – Overall Master Plan Revision of Skye Canyon development. The proposed size and location of MPU facilities are being changed with the concept of allowing development without impacting the National Monument.**

Skye Canyon Master Drainage Study Update #3 **proposes substancial changes to amend the previously approved Master Plan Amendment (MPA). A new MPA must be submitted to *City of Las Vegas* and *CCRFCD* for approval and shall be adopted by the *City of Las Vegas City Council* prior to the final approval of the subject Master Study Update #3.**

The City of Las Vegas will not allow further residential development outside of the limits of Phase 2 at this time until the New Master Plan is approved.

10th Submittal - Phase 2 interim impacts.

Revised Memo – National Monument Drainage Impacts

The Master Drainage Study for the subject project has been reviewed and:

	is approved subject to conformance to all City standards and the following conditions:
	must be resubmitted or supplemented including the following:
X	is conditionally approved subject to Clark County Regional Flood Control District concurrence.
X	is conditionally approved subject to Clark County Department of Public Works concurrence.
X	is conditionally approved subject to Nevada Department of Transportation concurrence.
X	is conditionally approved subject to BLM concurrence/approval.

1. The overall concept presented in the Master Plan Update #3 for Skye Canyon appears to satisfy the intent of providing regional connectivity of proposed Master Planned facilities without impacting the National Monument. Specific Technical Drainage Studies shall be required to address the specific impacts of each proposed Master Planned facility and the interaction with proposed facilities needed for each phase of development.
2. The Regional Flood Control District has requested that engineering consultants utilize the latest NRCS soils data as a part of the drainage study parameters. The Master Plan Update shall discuss the soil data used in the analysis and discuss the impacts on the overall hydraulic analysis. Provide an updated HEC-1 analysis and address local and MPU facility size modifications, if necessary based upon the revised Soil Survey data. Update the NRCS soils data in the References (Section 7). Review and revise Exhibit & Figures accordingly. This needs to be addressed as supplemental information prior to the MPA approval.
3. The Master Plan shall clearly define when the proposed interim facilities will be taken out of service and the construction of the required MPU facilities. A complete Phasing Plan shall be updated and approved by the City of Las Vegas and Regional Flood Control prior to the approval of the MPA.
4. This Update proposes to construct the *Log Cabin Detention Basin #3* with flows that will increase the runoff volume routed towards the *Tule Springs North Environmental Detention Basin* (TSNEDB). The engineer proposes to modify the TSNEDB by removing the orifice plate at the detention basin outfall pipe to increase the outflow. Detention basin design uses the orifice plate to insure that the basin outfall remains under inlet control parameters per the HCDDM, Section 1200. Discuss the impact of removing the orifice plate and provide calculations verifying that the existing outfall will convey the proposed 78 cfs under inlet control conditions. Discuss the drain time impacts to the TSNEDB and the impacts to the downstream development. Alternatively, the TSNEDB may need modifications to meet the HCDDM requirements. This could include the expansion of the TSNEDB basin to increase the storage volume accordingly or replacement of the TSNEDB outfall. These or other modifications need to be conceptually addressed as supplemental information prior to the MPA approval.
5. The premise of the Master Plan Update #3 for Skye Canyon is to add two (2) new CCRFCD Master Plan Detention Basins that are located outside of the Skye Canyon development. The City of Las Vegas is in the process of applying for BLM grants for these detention basin sites. These ultimate facilities shall be included in the MPA as CCRFCD facilities. The intent of the Detention Basin (157DB) is to reduce developed flows to maintain the existing condition flow rate in the ultimate condition and reduce the size of the downstream regional facilities. The intent of the Log Cabin Detention Basin (DB3) is to reduce developed flows to reduce the size of the downstream regional facilities that impact the TSNEDB. The concept for the addition of these two detention basins to the CCRFCD Master Plan is acceptable and will require the submittal of technical studies to refine the facility parameters. The construction of DB3 shall be the responsibility of the Skye Canyon

development and will be of sufficient size to reduce the flow impacts to development downstream and ultimately the TSNEDB.

6. This Master Study notes that drainage study updates for both Phase 1 and Phase 2 to accommodate the increased system flows impacting these Phases are necessary. A detailed analysis & review of the required updates will determine the system impacts and if any needed system upgrades are necessary to maintain HCDDM criteria.

7. ***Exhibit 1***: The developed condition Exhibit 1 shall be updated to include the coordinated Kyle Canyon Interchange drainage improvements. The size of the downstream facilities shall be reviewed based upon the interchange improvements.

8. ***Exhibit 1***: The developed condition Exhibit 1 shows that a portion of the developed flows will drain north of Moccasin into the BLM land and the National Monument to mimic existing drainage patterns. Concentrated flow discharges to the north shall require BLM and National Park Service concurrence.

9. ***Exhibit J***: The proposed facility 14 that drains from EC18 easterly to the proposed DB3 shall be a permanent facility meeting the requirements of Title 20 and shall be constructed as a permanent MPU facility with this development.

10. ***Exhibit J***: The proposed onsite DB1 & DB2 facilities shall include the collection facilities as a part of the detention basins areas.

11. ***Exhibit J***: The proposed changes to DB1 will impact the alignment and size of the ultimate collection facility that drains to DB1. The proposed facility shall remain an open channel to allow flow interception from the west in this undeveloped drainage.

12. The ***Master Land Use Plan*** has been provided however, any further changes to the adopted Master Land Use Plan shall require a complete update to the Master Drainage Study.

13. A copy of the approved 404 Permit from the Army Corps of Engineers has been provided.

14. The Phasing Plan for Phase 1 & 2 have addressed the interim condition and associated downstream impacts to address the impact of the long term discharge from the outfall of the Detention Basin #1. This includes upgrading the existing storm drain system near the intersection of Brent Lane and Fort Apache. These improvements have been included in the Detention Basin #1 improvements.

15. Flood Control requires an interim condition drainage analysis in support of the Phasing Plan that clearly shows the impacts to each Phase, existing washes, upstream concentration points and the downstream concentration points. Flood Control needs to make sure that each Phase of Development is protected during the interim and full build-out of this overall project. The current Phasing Plan does not adequately address these issues beyond Phase 2.

16. The interim conditions of the Phasing Plan need to address the impact of the long term discharge from the outfall of any future detention basins. It is noted that Only Detention Basin #1 has been reviewed. The technical review of Detention Basin #2 will determine the impacts downstream along the Iron Mountain Road alignment and/or other needed facilities to mitigate that impact. The provided Basin Attenuated Outfall Exhibit is only conceptual in nature and is subject to further review as a part of the technical reviews. Existing flow conditions do not have a drawn out discharge from a detention basin. This discharge impact must be accounted for in the interim condition without negatively impacting the existing downstream neighborhoods.

17. CCRFCD concurrence has previously been provided. A new concurrence for Update #3 shall be provided from CCRFCD after Conditional Approval by the City of Las Vegas.

18. CCPW concurrence has previously been provided. A new concurrence for Update #3 shall be provided from CCPW after Conditional Approval by the City of Las Vegas.
19. NDOT concurrence has previously been provided. A new concurrence for Update #3 shall be provided from NDOT after Conditional Approval by the City of Las Vegas.

The following comments are repeated until they are complete:

1. Please note that the Traffic Study must be approved prior to final approval of the Master Drainage Study. If the street layout does not match the Master Drainage Study, an update to the Master Drainage Study must be submitted to address the changes.
2. Per a meeting held in August 18, 2011 between the developer and the *City of Las Vegas*, it was agreed that NV Energy's approval of any proposed drainage facilities within their access easements (such as the proposed detention basins) must be obtained prior to the final approval of the Master Drainage Study. Please provide documentation for such approval or acknowledgment.
3. Please note that any future technical drainage study submittals that differ from the Master Drainage Study (ie. Changes in pods, infrastructure, flows etc.) will require an update to the Master Drainage Study and this update must be approved by the *City of Las Vegas Flood Control Section* prior to final approval of technical drainage study.
4. The proposed detention basins will require coordination with the State of Nevada, Division of Water Resources Dam Safety and will require the State's approval prior to permitting.
5. Please note that the proposed 100-year flood protection facilities identified on Exhibit J must be constructed by the Master Developer as a part of the master planned infrastructure. Technical drainage studies are required for each phase of the master planned infrastructure improvements. The technical drainage studies for the infrastructure improvements may be submitted with conditional approval of this Master Drainage Study. However, final approval for the Master Drainage Study must be obtained prior to conditional approval of the infrastructure drainage studies.
6. Technical drainage studies are required for each of the Pod's. The technical drainage studies for the Pod's may not be submitted until the conditional approval of the pertinent infrastructure drainage study is obtained. Final approval for the infrastructure drainage study must be obtained prior to conditional approval of the impacted Pod drainage studies.
7. Building permits for the homes within the individual Pod's will not be issued until construction of the street and flood control infrastructure around the Pod is substantially complete or interim protection is provided per the approved technical drainage study.
8. The design of debris basins at all major culvert entrances to limit the amount of sediment and debris entering the storm drain facilities will be required in a future infrastructure study.
9. Please note that all detention basins must be designed per CCRFCD criteria including a low flow facility around the detention basin.
10. Please note that all proposed interim facilities must be maintained by the master developer.
11. Provide a legal description of the proposed detention basins prior to recordation of the parent final map.
12. Coordinate the proposed drainage facilities with *Sheep Mountain Parkway* project. Please contact Greg McDermott, P.E., at 702-229-2143 to coordinate the proposed drainage facilities.

NOTE: Any future changes to the proposed design (or design assumptions) as outlined in the approved master drainage study and attached preliminary grading plan which affect drainage must be addressed in a Drainage Study Amendment and accepted by the *City of Las Vegas Flood Control Section.* Additionally, conditional acceptance of a drainage study is valid for a period of one (1)

year. If the proposed construction has not been completed in that time period, the *City of Las Vegas* reserves the right to require additional conditions and/or submission and acceptance of a complete drainage study update prior to further construction of a project.

NOTE: Please be advised that all land surface area disturbances over 1 acre or any area adjacent to a water way must submit to the Nevada Division of Environmental Protection a "Notice of Intent" to discharge that certifies a stormwater pollution prevention plan has been developed and is maintained on site; for inclusion in the Stormwater General Permit No. NVR100000. A phased construction unit in a contiguous subdivision is considered under construction until all stripped or disturbed surface areas have been covered by paving, building construction or planting. For more information, including forms and applications see http://ndep.nv.gov/bwpc/storm01.htm or call (775) 687-9429.

DISTRICT COMMENT(S): **UPDATE # 3 - SKYE CANYON MASTER DRAINAGE STUDY (DS4420N) (RFCD No. 16-9733)**

Dear Mr. Kwon:

Clark County Regional Flood Control District (District) reviewed Technical Drainage Study dated April 14, 2016, and Supplement No. 1 dated August 15, 2016 for above-mentioned project as submitted by SLATER HANIFAN GROUP. In addition, District is in receipt of the Conditional Letter of Acceptance from City of Las Vegas Department of Public Works dated August 15, 2016.

District has the following comment(s):

1. The proposed facilities identified in this Master Drainage Study impacts the North and South Environmental Enhancement Area (Detention Basins). The Engineer states that the peak outflow from the North Environmental Enhancement Area increases from 30 cfs to 80 cfs and the drain time increases from 2 days to 7 days. Provide a comparison between the existing and proposed condition design parameters of the detention basins. Provide pertinent design reference materials of the existing detention basins and provide calculations justifying that the proposed modifications meet District criteria and State Dam Safety requirements. Address permitting process for any modification to the detention basins. Address any impacts and mitigation measures.

2. Provide a detailed impact analysis to the Silverstone Ranch Golf Course in the interim and ultimate conditions based on the modifications proposed with the North Environment Enhancement Area. The analysis must be provided in this Master Drainage Study instead of deferring to the Master Plan Amendment.

3. Log Cabin Outfall/Exhibit K:

    a. Facility 52 (72" RCP) is identified as an "onsite CCRFCD Regional facility". The adjacent downstream facility, Facility 43, is identified as a "future CCRFCD Regional facility (By Others)". Facility 52 will be constructed with the Skye Canyon development and the flow will be discharged at a concentrated point and may impact the existing Floyd Lamb Park at Tule Springs. To ensure connectivity of the outfall pipe from the Log Cabin

600 S. Grand Central Parkway, Suite 300 • Las Vegas, Nevada 89106-4511
(702) 685-0000 • FAX: (702) 685-0001
Website: http://www.regionalflood.org

Detention Basin, Facility 43 must be constructed concurrently with Facility 52. Revise exhibits accordingly.

b. Facility X22 is labeled as an "Existing CCRFCD Regional Facility". This is not identified as an existing Regional facility on the Master Plain Update (MPU). Clarify and revise description accordingly.

c. Discuss the purpose of Facility D6. It appears that D6 will be diverting flow to the South Environmental Enhancement Area. Address impacts accordingly.

4. It is noted in the Engineer's response to comments that the construction of the Log Cabin Detention Basin (DB3) is proposed with the Skye Canyon development. However, DB3 is shown as a "future CCRFCD regional facilities (by others)". Verify and revise accordingly.

5. Based on District's discussion with City of Las Vegas, the limits of Log Cabin Detention Basin may increase in the ultimate condition. The Engineer must coordinate with City of Las Vegas for limits of Regional facilities in the ultimate condition.

6. There are three detention basins identified on the MPU along the west boundary of the Skye Canyon development (MOHU0186, MOST0060 and MOIR0098). This update eliminates the middle detention basin (MOSR0060) and the offsite flow is routed from the west to the north along a proposed trapezoidal channel to Detention Basin 2 (DB2 on Exhibit J). Address debris mitigation and sediment impacts to DB2. Provide a discussion regarding the capacity of the DB2 to accommodate the additional tributary area.

7. The project proposes multiple detention basins in series. Typically, detention basins designed in series have been found to be less efficient based on the District's experience. Address hydrologic models for multiple storm centering impacting the detention basins to ensure the downstream properties are properly flood protected. Discuss interim conditions during construction of Regional facilities.

8. For clarification, on Exhibits J & K, indicate on the legend description which facilities must be constructed by the Skye Canyon development and which facilities will be constructed by the Skye Canyon development with District funding contribution. Clarify the "future CCRFCD regional facilities (by others)" as it relates to funding responsibility.

9. The Skye Canyon Master Drainage Study Exhibits K and J do not match. Facilities at EC7 and EC8 are shown as "proposed local facilities" in Exhibit K and "onsite CCRFCD regional facilities" on Exhibit J. Additionally, facility linework is missing from one exhibit to the other along US95 at Eagle Canyon, along with CCP4.

REGIONAL FLOOD CONTROL DISTRICT

10. Exhibit J:

    a. It appears that Facility 9 traverses several parcels. Provide discussion on the chosen alignment and construction impacts to US-95.

    b. Exhibit J refers to Exhibit M for Future MPU Facility "MOKC", however exhibit M shows proposed conditions at the Bilbray Elementary School. Additionally, provide discussion on alignment of facility MOKC. Clarify and revise accordingly.

    c. It does not appear that certain facilities have adequate capacity to convey the design flow or do not match table descriptions. For example, Facility 11, 12, 13a, and 13b are shown as 72" RCP conveying flows in excess of 2,500 cfs. Verify all facility capacity, summary tables and table descriptions and revise accordingly.

11. For clarification, provide exhibit(s) identifying which facilities will be constructed with each phase of the Skye Canyon development.

12. This update to the Master Study will require an Amendment to the Master Plan. The District requests an annotated F-Map for all proposed facilities with the Skye Canyon development. Provide discussion on preliminary sizing calculation of proposed District facilities.

13. It is noted that several proposed pipes and concrete boxes have velocities in excess of 25 fps and over 44 fps. Per Section 802.2 of the District's Hydrologic Criteria and Drainage Design Manual (HCDDM), the maximum velocities in all storm drains shall be limited to 25 fps. Address impacts to joints, manholes, and junctions in the proposed storm drain facilities. It is noted the excessive velocities and specific site conditions for the Skye Canyon development relating to the proposed pipes and concrete boxes may require locking manhole covers or grated covers based on the HGL and the final grade of the project site. Note the Technical Drainage Studies for these developments should address the hydraulic in detail and provide any changes in design to meet the HCDDM.

14. Address erosive potential at all outlets and earthen channels to ensure public safety and clarify rip rap calculations. For example, the summary report table for Open Channel 3 shows 8.83 fps but the rip rap sizing calculations shows 8.2 fps.

15. Clarify the flow direction of the existing concrete u-channel along the Bonita Vista alignment (above facility 42) on Exhibit K. Address impacts to the project site and downstream properties.

REGIONAL FLOOD CONTROL DISTRICT

District's review of this project was limited to issues of Regional Flood Control Significance as defined in *Uniform Regulations for the Control of Drainage*.

The consultant must be advised to submit any revisions to the Technical Drainage Study and Improvement Plans to City of Las Vegas Department of Public Works for review/re-approval. District review of any such revisions will commence upon City of Las Vegas Department of Public Works' acceptance.

Please be aware that as additional information becomes available and/or restudies of Flood Insurance Studies are performed, information submitted by SLATER HANIFAN GROUP may be superseded. Compliance with regulatory elements and design standards specified in *Uniform Regulations for the Control of Drainage* does not imply a guarantee that properties will be free from flooding or flood damage.

The District, its officials, or employees assume no liability for information, data, or conclusions presented by consulting engineers. We, therefore, make no warranties, either expressed or implied, in conducting this review.

MASTER DRAINAGE STUDY
FOR SKY CANYON
CITY OF LAS VEGAS, NV

Dear Mr. Jones:

The Nevada Department of Transportation (NDOT) Hydraulics Section has received and reviewed the following document(s) for the above-referenced project.

Document:	**Dated:**
Update #3 to the Master Drainage Study for Sky Canyon	September 2016

The drainage design information presented in the reviewed document(s):

	is acceptable in concept. Final Hydraulic Section approval will be based on review of final design documents submitted with the NDOT Right-Of-Way Occupancy Permit application that must be submitted for this project.
x	is acceptable in concept. Final Hydraulic Section approval will be based on review of final design documents submitted with the NDOT Right-Of-Way Occupancy Permit application that must be submitted for this project. The following comments should be addressed with the permit application:
	must be supplemented or modified to satisfy the following comment(s) before preliminary Hydraulic Section approval can be granted:

1. As discussed in our phone conversation on October 19, 2016, Exhibit J properly identifies Facility 8 as a 13' x 8' RCB. However, the downstream pipe, Facility 9 is identified as a 60" RCP. According to the exhibits (Exhibit 4A) we received on July 22, 2016, the Faculty 9 should also be a 13' x 8' RCB. It was agreed that the sizes will be changed accordingly.

All submittals regarding this project must be forwarded through (or copied to) the local NDOT District permitting office. All pertinent drainage design documents (including those previously submitted for preliminary review) must be submitted to the local NDOT District permitting office with the Right-Of-Way Occupancy Permit Application. All plans and reports must be signed and stamped by a Nevada registered civil engineer.

No liability is assumed by the Department in performing this review. Verification and acceptance of all background information, design data and conclusions is the responsibility of the consulting engineer.

Please call me at (775) 888-7287 should you have any questions.

Sincerely,

Zelalem Alemu, P.E.
Senior Hydraulic Engineer

c: Charles Molisee, District 1 Permit Coordinator
Linda Olguin, District 1 Permit Coordinator

THIS PROGRAM REPLACES ALL PREVIOUS VERSIONS OF HEC-1 KNOWN AS HEC1 (JAN 73), HEC1GS, HEC1DB, AND HEC1KW.

THE DEFINITIONS OF VARIABLES -RTIMP- AND -RTIOR- HAVE CHANGED FROM THOSE USED WITH THE 1973-STYLE INPUT STRUCTURE.
THE DEFINITION OF -AMSKK- ON RM-CARD WAS CHANGED WITH REVISIONS DATED 28 SEP 81. THIS IS THE FORTRAN77 VERSION
NEW OPTIONS: DAMBREAK OUTFLOW SUBMERGENCE , SINGLE EVENT DAMAGE CALCULATION, DSS:WRITE STAGE FREQUENCY,
DSS:READ TIME SERIES AT DESIRED CALCULATION INTERVAL LOSS RATE:GREEN AND AMPT INFILTRATION
KINEMATIC WAVE: NEW FINITE DIFFERENCE ALGORITHM

MASTER DRAINAGE STUDY - UPDATE #4
ULTIMATE DRAINAGE CONDITION - REVISED TO ROUTE REGIONAL FLOW TO MOCCASIN RD
INCLUDES FULL WATERSHED WITH AREA UPSTREAM OF DB1, DB2 AND 157DB

RETURN PERIOD -------- 100-YEAR
DISTRIBUTION -------- 6-HOUR SDN3
PROJECT NO. --------- OLY1603.000
FILENAME ------------ ULT3.H1
DATE ----------------- July 2017
MODELED BY ---------- SMJ, updated by LKL

SIX HOUR DEPTH-AREA REDUCTION FACTORS

DRAINAGE AREA (MI^2)	DARF
0.0-0.49	1.00
0.5-0.99	0.98
1.0-1.99	0.97
2.0-3.99	0.93
4.0-5.99	0.91
6.0-7.99	0.90

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Las Vegas Valley Area, Nevada, Part of Clark County

August 26, 2016

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (http://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means

for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil scientists classified and named the soils in the survey area, they compared the

individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

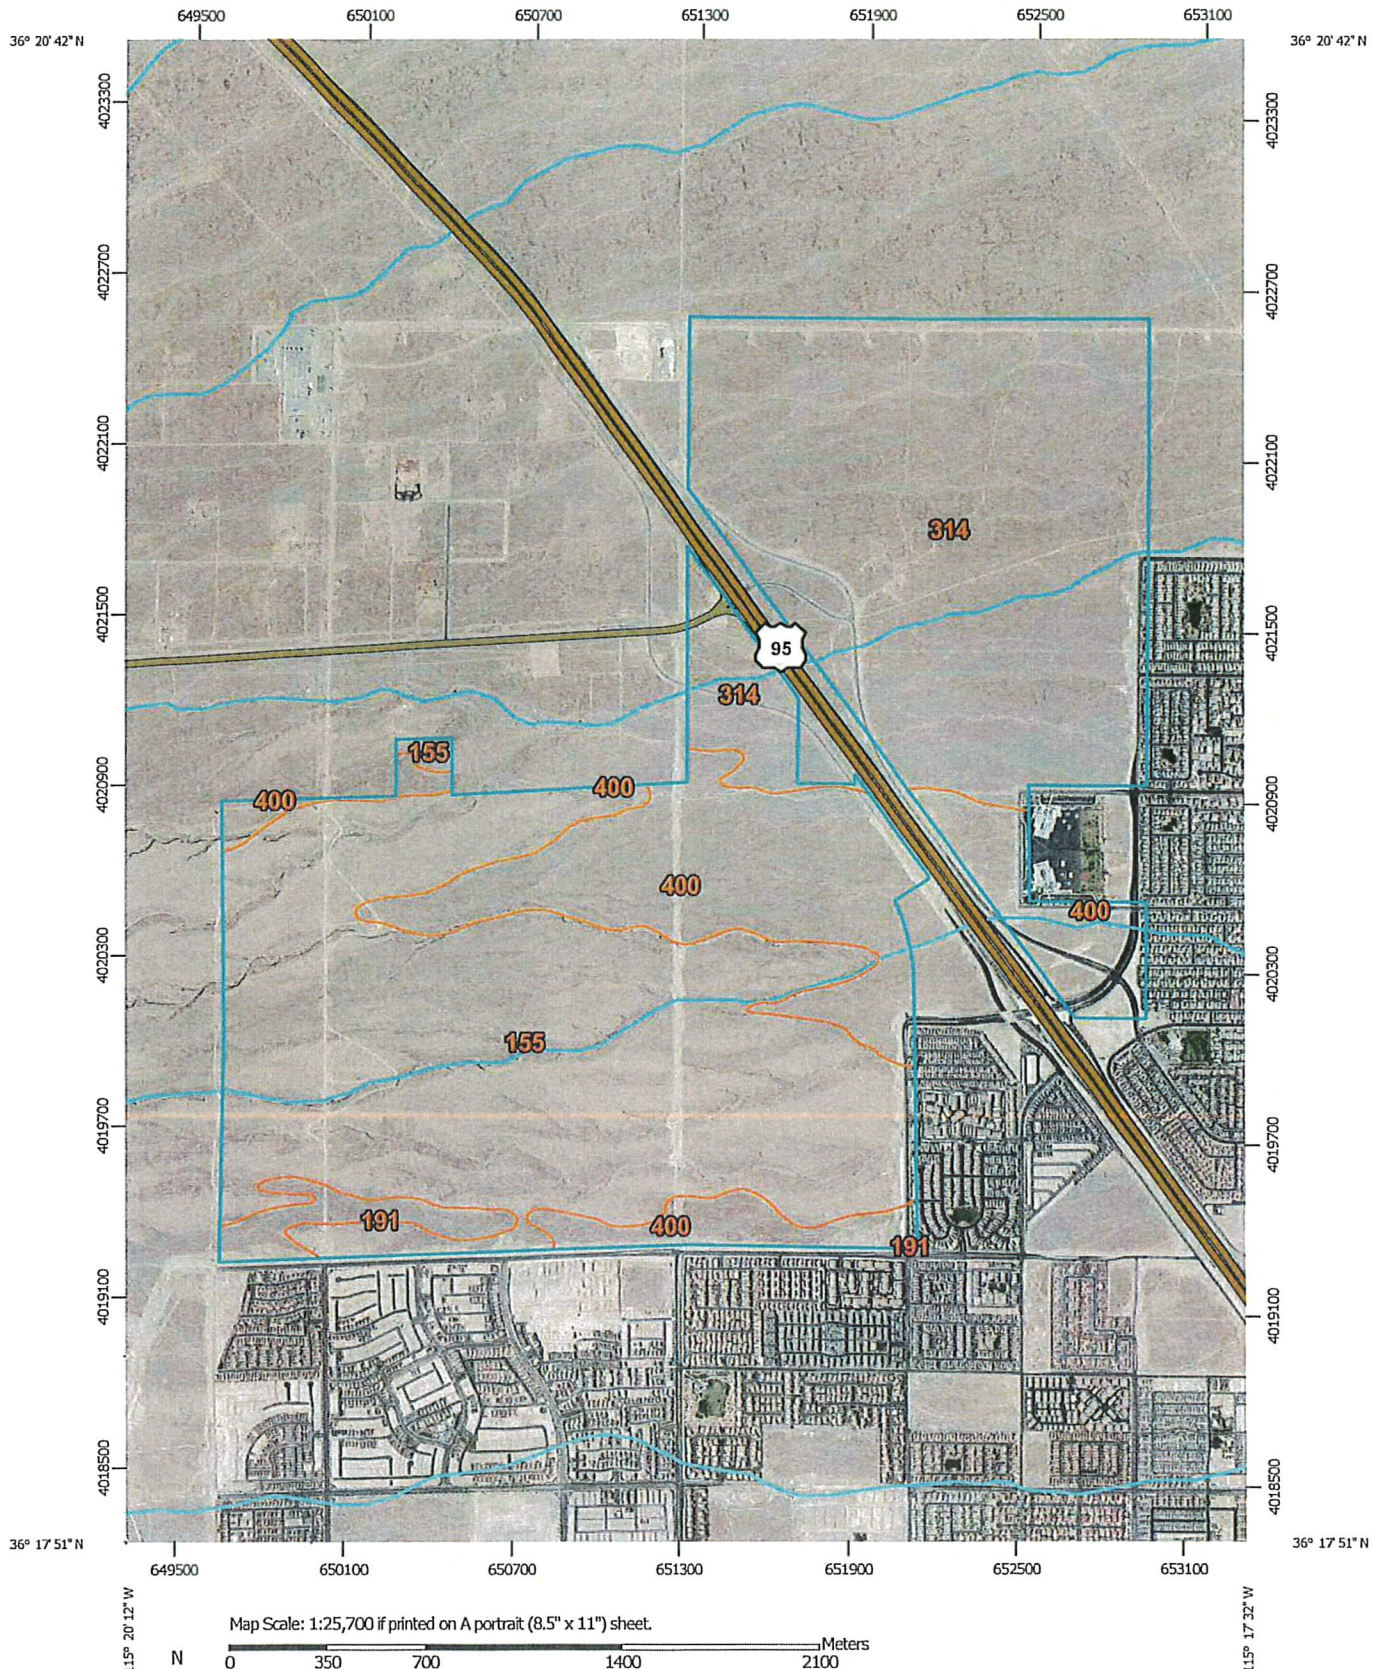

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Las Vegas Valley Area, Nevada, Part of Clark County
Survey Area Data: Version 10, Aug 22, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 7, 2011—Jun 2, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Las Vegas Valley Area, Nevada, Part of Clark County (NV788)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
155	Cave gravelly fine sandy loam, 4 to 15 percent slopes	698.8	41.3%
191	Dallan very cobbly fine sandy loam, 2 to 8 percent slopes	32.4	1.9%
314	Welser-Wechech association	625.7	37.0%
400	Tencee very gravelly fine sandy loam, 2 to 8 percent slopes	333.6	19.7%
Totals for Area of Interest		1,690.5	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that

have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Las Vegas Valley Area, Nevada, Part of Clark County

155—Cave gravelly fine sandy loam, 4 to 15 percent slopes

Map Unit Setting

National map unit symbol: hr9w
Elevation: 2,000 to 4,800 feet
Mean annual precipitation: 4 to 12 inches
Mean annual air temperature: 57 to 70 degrees F
Frost-free period: 180 to 280 days
Farmland classification: Not prime farmland

Map Unit Composition

Cave and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cave

Setting

Landform: Fan remnants
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Mixed alluvium

Typical profile

H1 - 0 to 15 inches: gravelly fine sandy loam
H2 - 15 to 60 inches: indurated

Properties and qualities

Slope: 4 to 15 percent
Depth to restrictive feature: 4 to 20 inches to petrocalcic
Natural drainage class: Well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 40 percent
Salinity, maximum in profile: Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)
Available water storage in profile: Very low (about 1.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: D
Other vegetative classification: LIMY 3-5" P.Z. (030XB019NV_3)
Hydric soil rating: No

191—Dalian very cobbly fine sandy loam, 2 to 8 percent slopes

Map Unit Setting

National map unit symbol: hrb4
Elevation: 2,200 to 3,400 feet
Mean annual precipitation: 4 to 6 inches
Mean annual air temperature: 61 to 66 degrees F
Frost-free period: 210 to 250 days
Farmland classification: Not prime farmland

Map Unit Composition

Dalian and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Dalian

Setting

Landform: Fan skirts
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Alluvium derived from limestone and dolostone

Typical profile

H1 - 0 to 5 inches: very cobbly fine sandy loam
H2 - 5 to 60 inches: very gravelly fine sandy loam

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 60 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: A
Hydric soil rating: No

314—Weiser-Wechech association

Map Unit Setting

National map unit symbol: 1tf6l
Elevation: 1,610 to 4,850 feet
Mean annual precipitation: 5 to 7 inches
Mean annual air temperature: 57 to 70 degrees F
Frost-free period: 180 to 300 days
Farmland classification: Not prime farmland

Map Unit Composition

Weiser, very rarely flooded, and similar soils: 70 percent
Wechech and similar soils: 15 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Weiser, Very Rarely Flooded

Setting

Landform: Fan remnants
Landform position (two-dimensional): Summit
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Alluvium derived from limestone and dolomite

Typical profile

H1 - 0 to 6 inches: extremely gravelly fine sandy loam
H2 - 6 to 60 inches: extremely gravelly sandy loam

Properties and qualities

Slope: 2 to 8 percent
Percent of area covered with surface fragments: 5.0 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.57 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Very rare
Frequency of ponding: None
Calcium carbonate, maximum in profile: 40 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Very low (about 2.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: A
Ecological site: LIMY 5-7 P.Z. (R030XB005NV)
Hydric soil rating: No

Description of Wechech

Setting

Landform: Fan remnants
Landform position (two-dimensional): Summit
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Alluvium derived from limestone and dolomite

Typical profile

H1 - 0 to 2 inches: very gravelly sandy loam
H2 - 2 to 7 inches: very gravelly sandy loam
H3 - 7 to 13 inches: very gravelly sandy loam
H4 - 13 to 60 inches: cemented material

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: 8 to 14 inches to petrocalcic
Natural drainage class: Well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 50 percent
Salinity, maximum in profile: Nonsaline to slightly saline (0.0 to 4.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Very low (about 0.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: D
Ecological site: LIMY 5-7 P.Z. (R030XB005NV)
Hydric soil rating: No

Minor Components

Threelakes

Percent of map unit: 6 percent
Landform: Fan remnants
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: CALCAREOUS LOAM 5-7 P.Z. (R030XA066NV)
Hydric soil rating: No

Weiser, very rarely flooded

Percent of map unit: 5 percent
Landform: Fan remnants
Down-slope shape: Linear
Across-slope shape: Convex
Ecological site: GRAVELLY FAN 5-7 P.Z. (R030XB075NV)
Hydric soil rating: No

Typic torriorthents, sandy-skeletal, occasionally flooded

Percent of map unit: 4 percent

Landform: Drainageways
Down-slope shape: Linear
Across-slope shape: Concave
Ecological site: VALLEY WASH (R030XB028NV)
Hydric soil rating: No

400—Tencee very gravelly fine sandy loam, 2 to 8 percent slopes

Map Unit Setting

National map unit symbol: hrc1
Elevation: 2,400 to 5,700 feet
Mean annual precipitation: 4 to 10 inches
Mean annual air temperature: 57 to 64 degrees F
Frost-free period: 180 to 250 days
Farmland classification: Not prime farmland

Map Unit Composition

Tencee and similar soils: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Tencee

Setting

Landform: Fan remnants
Down-slope shape: Linear
Across-slope shape: Convex
Parent material: Alluvium derived from limestone and dolomite

Typical profile

H1 - 0 to 9 inches: very gravelly fine sandy loam
H2 - 9 to 15 inches: very gravelly sandy loam
H3 - 15 to 19 inches: indurated

Properties and qualities

Slope: 2 to 8 percent
Depth to restrictive feature: 7 to 20 inches to petrocalcic
Natural drainage class: Well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 40 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 2.0
Available water storage in profile: Very low (about 1.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 7s
Hydrologic Soil Group: D
Hydric soil rating: No

Soil Information for All Uses

Soil Properties and Qualities

The Soil Properties and Qualities section includes various soil properties and qualities displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each property or quality.

Soil Qualities and Features

Soil qualities are behavior and performance attributes that are not directly measured, but are inferred from observations of dynamic conditions and from soil properties. Example soil qualities include natural drainage, and frost action. Soil features are attributes that are not directly part of the soil. Example soil features include slope and depth to restrictive layer. These features can greatly impact the use and management of the soil.

Hydrologic Soil Group

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

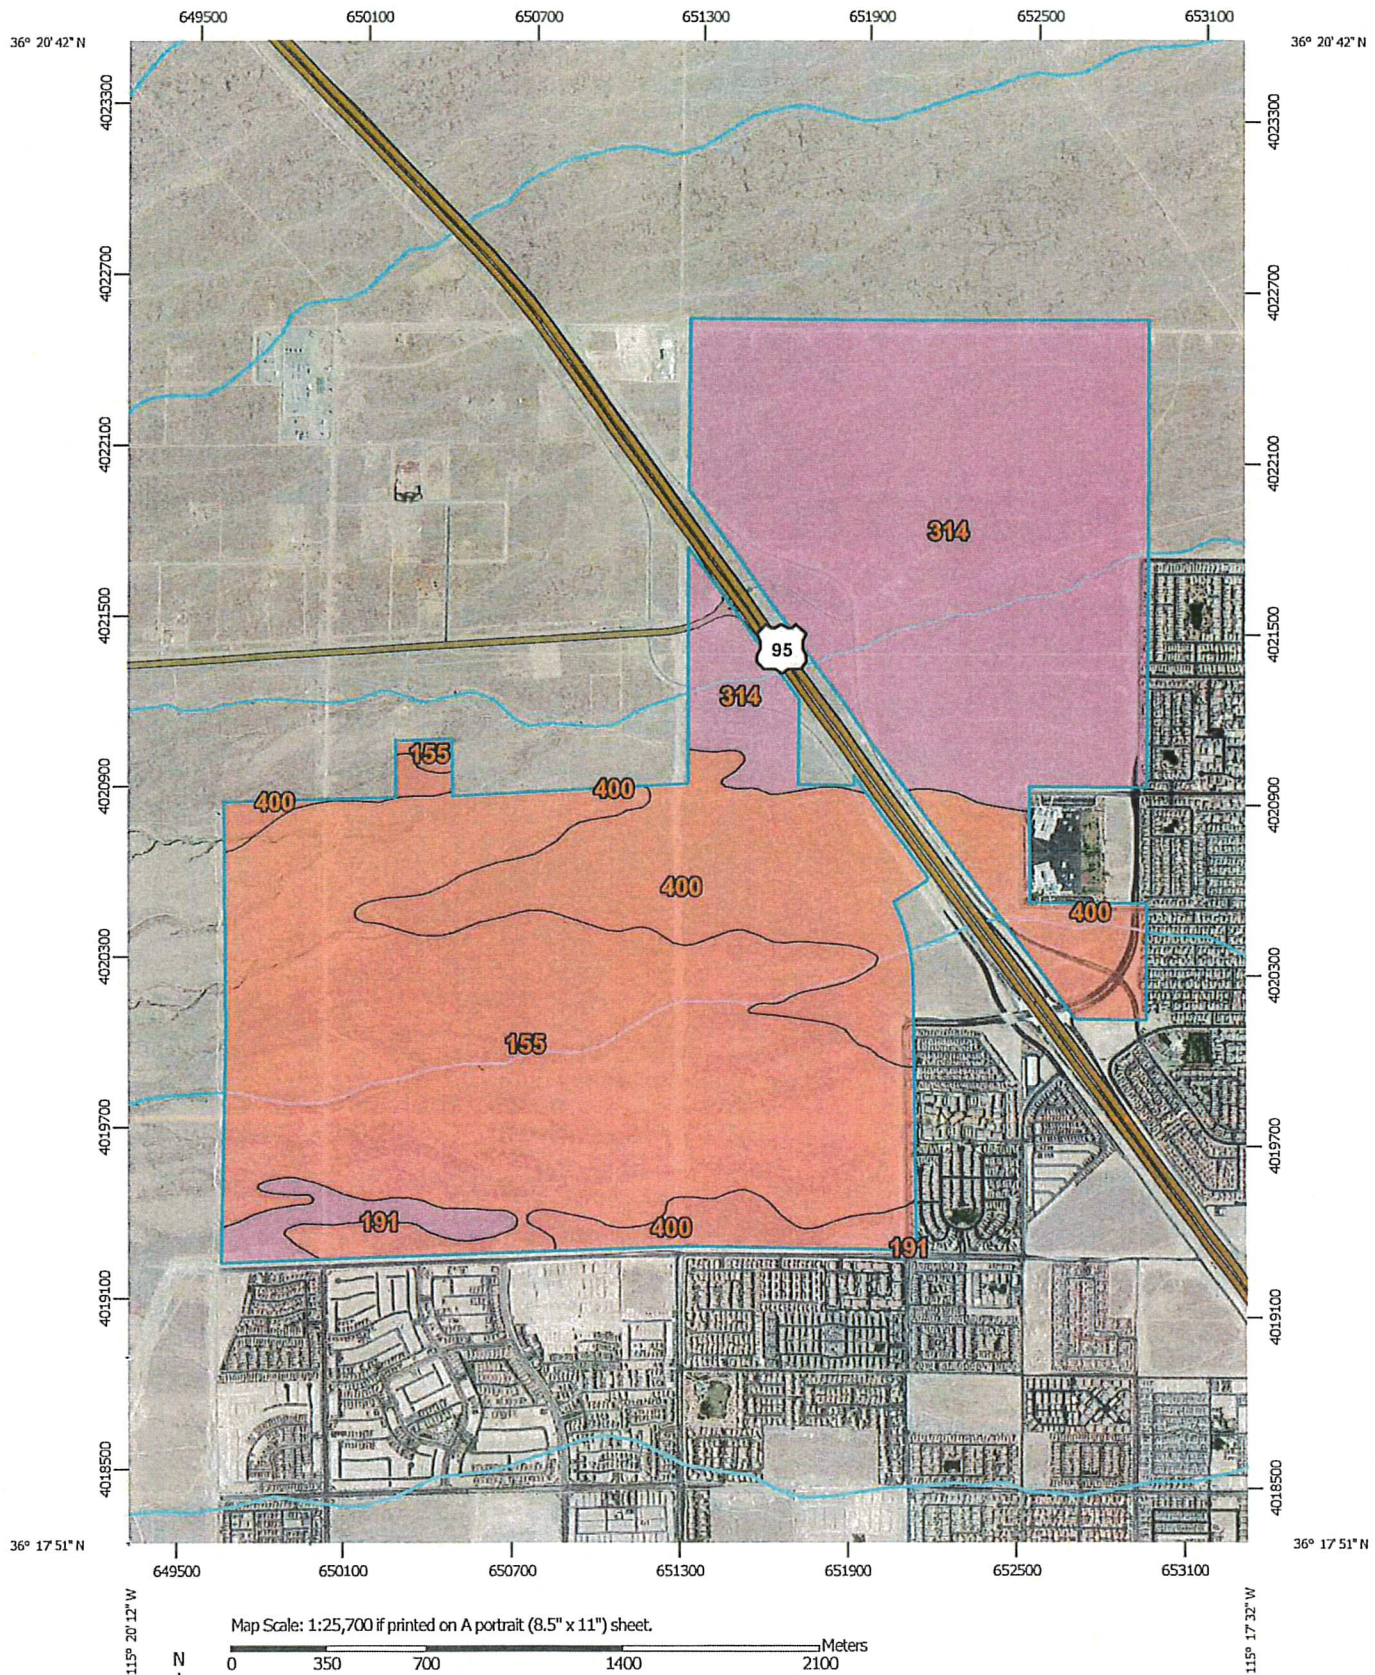

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Las Vegas Valley Area, Nevada, Part of Clark County
Survey Area Data: Version 10, Aug 22, 2014

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 7, 2011—Jun 2, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Table—Hydrologic Soil Group

Hydrologic Soil Group—Summary by Map Unit — Las Vegas Valley Area, Nevada, Part of Clark County (NV788)				
Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
155	Cave gravelly fine sandy loam, 4 to 15 percent slopes	D	698.8	41.3%
191	Dalian very cobbly fine sandy loam, 2 to 8 percent slopes	A	32.4	1.9%
314	Welser-Wechech association	A	625.7	37.0%
400	Tencee very gravelly fine sandy loam, 2 to 8 percent slopes	D	333.6	19.7%
Totals for Area of Interest			**1,690.5**	**100.0%**

Rating Options—Hydrologic Soil Group

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Soil Reports

The Soil Reports section includes various formatted tabular and narrative reports (tables) containing data for each selected soil map unit and each component of each unit. No aggregation of data has occurred as is done in reports in the Soil Properties and Qualities and Suitabilities and Limitations sections.

The reports contain soil interpretive information as well as basic soil properties and qualities. A description of each report (table) is included.

Water Features

This folder contains tabular reports that present soil hydrology information. The reports (tables) include all selected map units and components for each map unit. Water Features include ponding frequency, flooding frequency, and depth to water table.

Hydrologic Soil Group and Surface Runoff

This table gives estimates of various soil water features. The estimates are used in land use planning that involves engineering considerations.

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The four hydrologic soil groups are:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas.

Surface runoff refers to the loss of water from an area by flow over the land surface. Surface runoff classes are based on slope, climate, and vegetative cover. The concept indicates relative runoff for very specific conditions. It is assumed that the surface of the soil is bare and that the retention of surface water resulting from irregularities in the ground surface is minimal. The classes are negligible, very low, low, medium, high, and very high.

Report—Hydrologic Soil Group and Surface Runoff

Absence of an entry indicates that the data were not estimated. The dash indicates no documented presence.

Hydrologic Soil Group and Surface Runoff–Las Vegas Valley Area, Nevada, Part of Clark County			
Map symbol and soil name	**Pct. of map unit**	**Surface Runoff**	**Hydrologic Soil Group**
155—Cave gravelly fine sandy loam, 4 to 15 percent slopes			
Cave	100	Very high	D
191—Dalian very cobbly fine sandy loam, 2 to 8 percent slopes			
Dalian	100	Low	A
314—Weiser-Wechech association			
Weiser, very rarely flooded	70	Low	A
Wechech	15	Very high	D
Threelakes	6	Low	A
Weiser, very rarely flooded	5	Low	B
Typic torriorthents, sandy-skeletal, occasionally flooded	4	Very low	A
400—Tencee very gravelly fine sandy loam, 2 to 8 percent slopes			
Tencee	100	Very high	D

Old Soils Survey Information

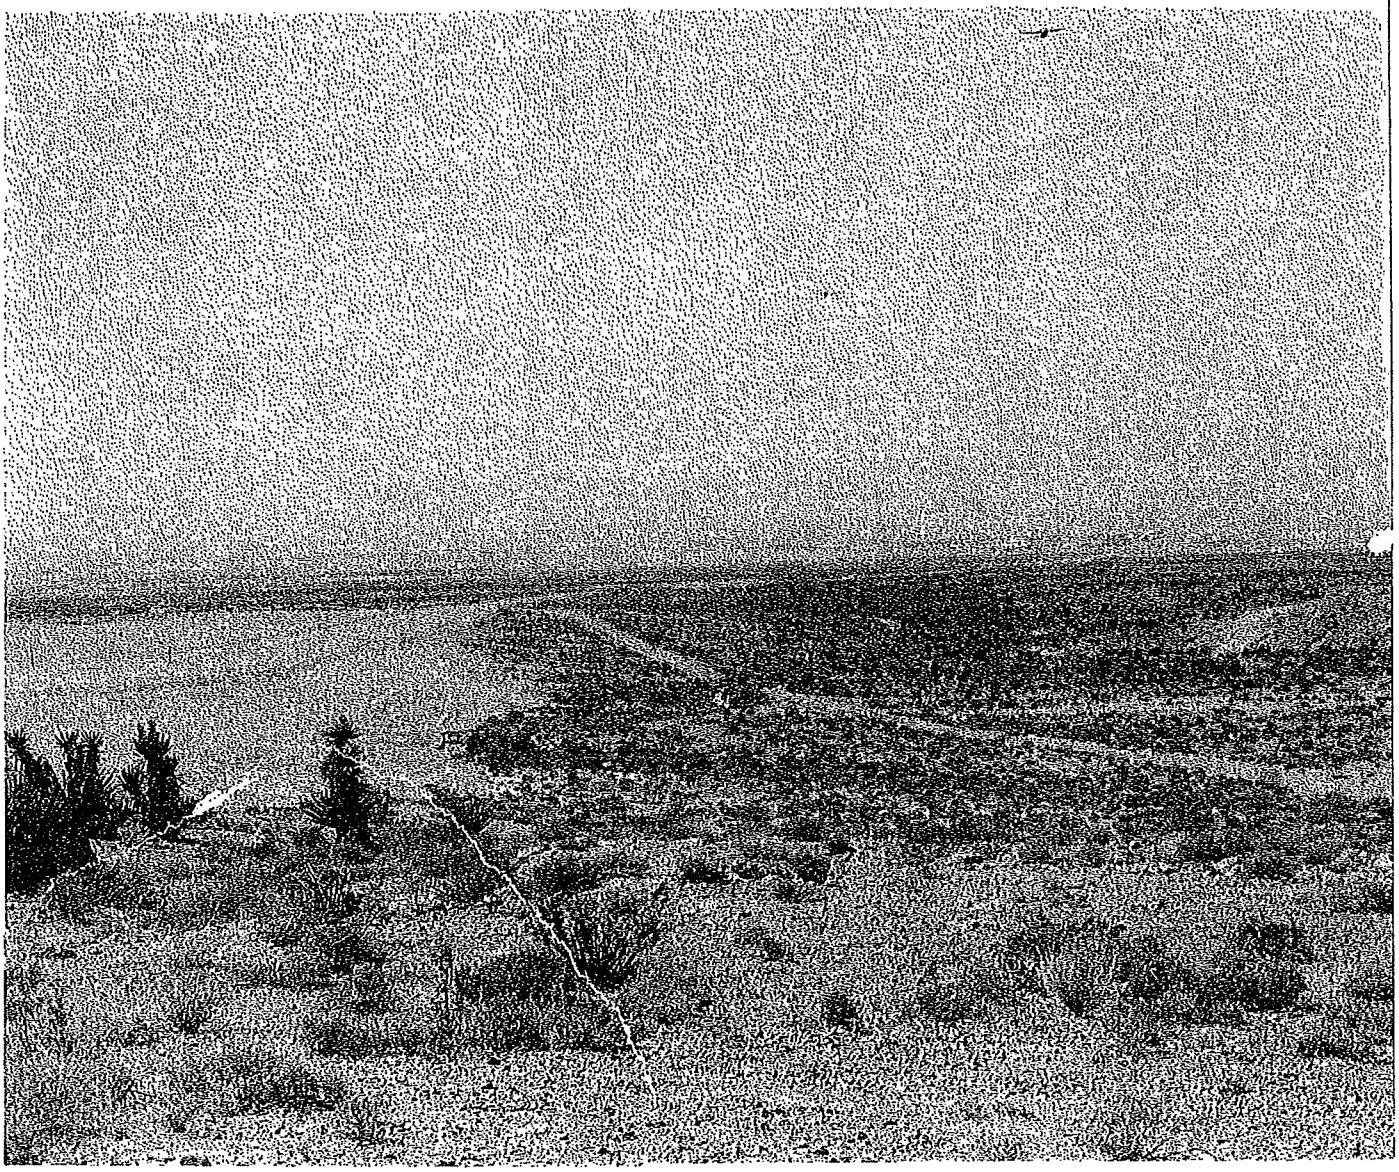

United States Department of Agriculture

Soil Conservation Service

In cooperation with United States Department of the Interior, Bureau of Land Management, and University of Nevada Agricultural Experiment Station

Soil Survey of Las Vegas Valley Area Nevada

Part of Clark County

This unit is limited for roads because of the depth to the indurated hardpan. Roads should be designed to minimize cuts.

This map unit is in capability subclass VIIs, nonirrigated, and in horticultural group 6.

152—Cave gravelly fine sandy loam, 0 to 4 percent slopes. This shallow, well drained soil is on erosional fan remnants. It formed in alluvium derived from various kinds of rock.

Typically, about 80 percent of the surface is covered with a desert pavement of pebbles and cobbles. The surface layer is pale brown gravelly fine sandy loam about 12 inches thick. The next layer to a depth of 36 inches is an indurated, lime-cemented hardpan. The underlying material to a depth of 60 inches or more is light brown very gravelly sandy loam. Depth to the hardpan ranges from 4 to 20 inches.

Included in this unit are about 5 percent Arizo soils, flooded, in channels, 5 percent Canutio soils on inset fans, and 5 percent Grapevine soils on side slopes of erosional fan remnants. Included areas make up about 5 percent of the total acreage. The percentage varies from one area to another.

Permeability of the Cave soil is moderate above the hardpan. Available water capacity is very low. Effective rooting depth is 4 to 20 inches. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is high if the surface is disturbed.

This unit is used mainly for urban development. It is also used as habitat for desert wildlife and for recreation.

This unit is poorly suited to urban development. The main limitation is the shallow depth to the hardpan. Excavation for building sites is limited by the hardpan, and heavy equipment is needed. Special design of septic tank absorption fields is needed.

Roads should be designed to minimize cuts because of the limited depth to the hardpan.

It is difficult to establish plants in areas where the pan is exposed. Mulching and fertilizing cut areas help to establish plants. Lawn grasses, shrubs, and trees that are not sensitive to lime-induced chlorosis are well suited to use in landscaping. Annual applications of iron chelates reduce the effects of chlorosis.

Intermittent streams form the drainageways in this unit. These drainageways are subject to rare or occasional periods of high-velocity flooding. Care should be taken during urbanization to accommodate the runoff from the drainageways. If drains become plugged during a major flood, accelerated erosion and damage to roads, buildings, and other structures can occur.

This map unit is in capability subclass VIIs, nonirrigated, and in horticultural group 6.

155—Cave gravelly fine sandy loam, 4 to 15 percent slopes. This shallow, well drained soil is on erosional fan remnants. It formed in alluvium derived from various kinds of rock.

Typically, about 70 percent of the surface is covered with a desert pavement of rock fragments and pan fragments. The surface layer is light brown gravelly fine sandy loam about 5 inches thick. The underlying material to a depth of 15 inches is light brown gravelly fine sandy loam. The next layer to a depth of 60 inches or more is an indurated, lime-cemented hardpan. Depth to the hardpan ranges from 4 to 20 inches.

Included in this unit are about 5 percent Arizo soils, flooded, in channels and 5 percent Caliza soils on side slopes of erosional fan remnants. Included areas make up about 10 percent of the total acreage. The percentage varies from one area to another.

Permeability of the Cave soil is moderate above the hardpan. Available water capacity is very low. Effective rooting depth is 4 to 20 inches. Runoff is moderate, and the hazard of water erosion is slight. The hazard of soil blowing is high if the surface is disturbed.

This unit is used as habitat for desert wildlife and for recreation.

This unit is limited for roads because of the depth to the indurated hardpan. Roads should be designed to minimize cuts. Cutting and filling can be reduced by building roads in the less sloping areas.

This map unit is in capability subclass VIIs, nonirrigated and in horticultural group 6.

160—Destazo cobbly fine sandy loam, 0 to 2 percent slopes. This very deep, well drained soil is on relict alluvial flats. It formed in alluvium derived dominantly from limestone and dolomite.

Typically, about 60 percent of the surface is covered with a desert pavement of pebbles and cobbles. The surface layer is pink cobbly fine sandy loam about 11 inches thick. The upper 29 inches of the underlying material is light brown very gravelly sandy clay loam, and the lower part to a depth of 60 inches or more is pinkish white gravelly sandy loam containing some crystalline gypsum.

Included in this unit are about 5 percent Bracken very cobbly fine sandy loam, 2 to 8 percent slopes, on side slopes of slightly higher remnants of relict alluvial flats and 10 percent Las Vegas soils on summits of slightly higher remnants of alluvial flats. Included areas make up about 15 percent of the total acreage.

Permeability of this Destazo soil is moderately slow. Available water capacity is moderate. Effective rooting depth is 60 inches or more. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is moderate.

This unit is used mainly as habitat for desert wildlife and for recreation. It is also used for urban development.

This unit is well suited to the construction of dwellings.

The main limitation for septic tank absorption fields is restricted permeability. The operation of septic tank

sandy loam about 4 inches thick. The upper 7 inches of the underlying material is light yellowish brown extremely gravelly fine sandy loam, the next 6 inches is light yellowish brown very gravelly sandy loam, and the lower part to a depth of 61 inches is light yellowish brown extremely gravelly fine sandy loam. Pebbles cover 50 to 75 percent of the surface.

Included in this unit are about 5 percent Tencee soils on erosional fan remnants and 10 percent Arizo soils, flooded, in channels. Included areas make up about 15 percent of the total acreage. The percentage varies from one area to another.

Permeability of this Dalian soil is moderately rapid. Available water capacity is low. Effective rooting depth is 60 inches or more. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is moderate.

This unit is used mainly as habitat for desert wildlife and for recreation. It is also used for urban development.

This unit is well suited to the construction of dwellings.

Septic tank absorption fields generally function well unless the density of housing is too high.

Roads are easily constructed and maintained.

The main limitation for lawns and landscaping is the pebbles on the surface and throughout the soil. Topsoil is needed for best results when landscaping, particularly in areas used for lawns. Lawn grasses, shrubs, and trees that are not sensitive to lime-induced chlorosis are well suited to use in landscaping. Annual applications of iron chelates reduce the effects of chlorosis.

Intermittent streams form the drainageways in this unit. These drainageways are subject to rare or occasional periods of high-velocity flooding. Care should be taken during urbanization to accommodate the runoff from the drainageways. If drains become plugged during a major flood, accelerated erosion and damage to roads, buildings, and other structures can occur.

This map unit is in capability subclasses IVs, irrigated, and VIIs, nonirrigated. It is in horticultural group 2.

191—Dalian very cobbly fine sandy loam, 2 to 8 percent slopes. This very deep, well drained soil is on fan skirts. It formed in alluvium derived dominantly from limestone and dolomite.

Typically, about 85 percent of the surface is covered with a desert pavement of rock fragments. The surface layer is light yellowish brown very cobbly fine sandy loam about 5 inches thick. The underlying material to a depth of 60 inches or more is light yellowish brown very gravelly sandy loam to extremely gravelly fine sandy loam.

Included in this unit are about 10 percent Tencee soils on erosional fan remnants and 5 percent Arizo soils, flooded, in channels. Included areas make up about 15 percent of the total acreage. The percentage varies from one area to another.

Permeability of this Dalian soil is moderately rapid. Available water capacity is low. Effective rooting depth is 60 inches or more. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is moderate if the surface is disturbed. This soil is subject to rare periods of flooding during prolonged, high-intensity storms. Channeling and deposition are common along streambanks.

Most areas of this unit are used as habitat for desert wildlife and for recreation. A few areas are used for urban development.

The main limitation for construction of dwellings is the hazard of flooding. Dikes and channels that have outlets for floodwater can be used to protect buildings from flooding.

Dikes and channels that have outlets for floodwater can be used to protect onsite sewage disposal systems from flooding.

Channeling and deposition can be minimized and maintenance costs reduced by protecting roads from flooding.

The main limitations for lawns and landscaping are the cobbles and pebbles on the surface and throughout the soil. Topsoil is needed for best results when landscaping, particularly in areas used for lawns. Lawn grasses, shrubs, and trees that are not sensitive to lime-induced chlorosis are well suited to use in landscaping. Annual applications of iron chelates reduce the effects of chlorosis.

This map unit is in capability subclass VIIs, nonirrigated, and in horticultural group 2.

192—Dalian-McCullough complex, 0 to 4 percent slopes. This map unit is on fan skirts.

This unit is 55 percent Dalian very gravelly fine sandy loam, 0 to 4 percent slopes, and 35 percent McCullough very gravelly very fine sandy loam, gravelly substratum, 0 to 4 percent slopes. Both the Dalian and McCullough soils are on alluvial fan skirts. The components of this unit are so intricately intermingled that it was not practical to map them separately at the scale used.

Included in this unit are about 5 percent Las Vegas soils on basin floor remnants and 5 percent Tencee soils on erosional fan remnants. Included areas make up about 10 percent of the total acreage.

The Dalian soil is very deep and well drained. It formed in alluvium derived from various kinds of rock. Typically, about 75 percent of the surface is covered with a desert pavement of pebbles. The surface layer is light yellowish brown very gravelly fine sandy loam about 5 inches thick. The underlying material to a depth of 60 inches or more is light yellowish brown very gravelly sandy loam.

Permeability of the Dalian soil is moderately rapid. Available water capacity is low. Effective rooting depth is 60 inches or more. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is

Because of the content of gypsum and other salts in the soil, salt-tolerant plants should be selected for lawns and landscaping. Because of the underlying hardpan, deep cuts should be avoided on this soil. Lawn grasses, shrubs, and trees that are not sensitive to lime-induced chlorosis are well suited to use in landscaping. Annual applications of iron chelates reduce the effects of chlorosis.

This map unit is in capability subclasses IIIs, irrigated, and VIIs, nonirrigated. It is in horticultural group 6.

390—Spring clay loam. This very deep, moderately well drained soil is on alluvial flats. It formed in gypsiferous lacustrine sediment. Slope is 0 to 2 percent.

Typically, the surface layer is pale brown clay loam about 5 inches thick. The underlying material to a depth of 60 inches or more is stratified, light brown to pink silt loam to silty clay, averaging silty clay loam, and contains many gypsum crystals.

Included in this unit are about 10 percent Land soils on alluvial flats and 5 percent Las Vegas soils on relict alluvial flats. Included areas make up about 15 percent of the total acreage.

Permeability of the Spring soil is slow. Available water capacity is high. Effective rooting depth is 60 inches or more. Runoff is slow, and the hazard of water erosion is slight. The hazard of soil blowing is high. This soil is subject to rare periods of flooding during prolonged, high-intensity storms. Channeling and deposition are common along streambanks. This soil is strongly affected by salts to a depth of 5 inches, and it is moderately affected below this depth.

This unit is used mainly for urban development. It is also used as habitat for desert wildlife and for recreation.

The main limitation for construction of dwellings is the hazard of flooding. Dikes and channels that have outlets for floodwater can be used to protect buildings from flooding. Gypsum in the soil can induce electrochemical action that corrodes concrete. This limitation can be overcome by using cement that is resistant to sulfate corrosion.

The main limitation for septic tank absorption fields is restricted permeability. Special design of septic tank absorption fields is needed. Using long absorption lines and backfilling the trench with sandy material help to compensate for the restricted permeability.

The Spring soil is limited for roads because of limited ability to support a load. Roads and streets should be designed to compensate for the instability of the soil.

The main limitation for lawns and landscaping is the excess soluble salts in the soil. Intensive management is required to reduce the salinity and maintain soil productivity. Excess salts in the soil can be flushed out by using heavy periodic applications of water. Because of the content of gypsum and other salts in the soil, salt-tolerant plants should be selected.

This map unit is in capability subclasses VIs, irrigated, and VIIs, nonirrigated. It is in horticultural group 4.

400—Tencee very gravelly fine sandy loam, 2 to 8 percent slopes. This shallow, well drained soil is on erosional fan remnants. It formed in alluvium derived dominantly from limestone and dolomite.

Typically, 75 percent of the surface is covered with a well developed desert pavement of pebbles. There is a dark desert varnish on the exposed surfaces of the rock fragments. The surface layer is light brown very gravelly fine sandy loam about 5 inches thick. The next layer is light brown very gravelly fine sandy loam and very gravelly sandy loam and is weakly cemented with lime to a depth of about 15 inches. An indurated, lime-cemented hardpan is at a depth of about 15 inches. Depth to the hardpan ranges from 7 to 20 inches.

Included in this unit are small areas of Dalian soils on side slopes of fan remnants and on inset fans. Included areas make up about 10 percent of the total acreage. The percentage varies from one area to another.

Permeability of the Tencee soil is moderate above the hardpan. Available water capacity is very low. Effective rooting depth is 7 to 20 inches. Runoff is medium, and the hazard of water erosion is slight. The hazard of soil blowing is moderate if the surface is disturbed.

This unit is used as habitat for desert wildlife and for recreation.

This unit is limited for roads because of the depth to the indurated hardpan. Roads should be designed to minimize cuts. Heavy equipment is needed for excavation.

This map unit is in capability subclass VIIs, nonirrigated, and in horticultural group 6.

415—Aztec very gravelly sandy loam, 2 to 8 percent slopes. This very deep, well drained soil is on erosional fan remnants. It formed in alluvium derived from various kinds of rock.

Typically, 80 percent of the surface is covered with pebbles. The surface layer is light yellowish brown very gravelly sandy loam about 2 inches thick. The underlying material to a depth of 63 inches is stratified, light yellowish brown, light brown, and light reddish brown very gravelly sandy loam to extremely gravelly loamy coarse sand with weak, continuous gypsum cementation in some layers.

Included in this unit are about 5 percent Bracken soils on pediment remnants, 5 percent Rock outcrop on isolated ridges, and 5 percent Caliza soils on erosional fan remnants. Included areas make up about 15 percent of the total acreage. The percentage varies from one area to another.

Permeability of the Aztec soil is moderately slow. Available water capacity is low. Effective rooting depth is 60 inches or more. Runoff is medium, and the hazard of water erosion is slight. The hazard of soil blowing is high

varies from one area to another. About 500 acres, east of Henderson, is mostly an Akela soil that has slopes of 8 to 15 percent. About 40 acres of Rock outcrop, gypsum, shown by symbols, is in an area in the northeastern corner of sec. 33, T. 21 S., R. 63 E.

The Akela soil is shallow and well drained. It formed in residuum derived dominantly from basalt and andesite. Typically, about 92 percent of the surface is covered with a desert pavement of pebbles, cobbles, and stones. The surface layer is pale brown very cobbly fine sandy loam about 3 inches thick. The underlying material to a depth of 11 inches is light brown very gravelly fine sandy loam. Basalt is at a depth of about 11 inches. Depth to bedrock ranges from 10 to 20 inches.

Permeability of the Akela soil is moderate above the bedrock. Available water capacity is very low. Effective rooting depth is 10 to 20 inches. Runoff is rapid, and the hazard of water erosion is moderate. The hazard of soil blowing is moderate if the surface is disturbed.

Rock outcrop consists of exposed areas of undifferentiated volcanic rock.

This unit is used as habitat for desert wildlife and for recreation.

This unit is limited for roads because of the areas of Rock outcrop, steepness of slopes, and shallow depth to bedrock. Roads should be designed to minimize cuts. Cutting and filling can be reduced by building roads in the less sloping areas of the unit. Roads should be provided with adequate surface drainage. Erosion can be controlled and maintenance costs reduced by stabilizing areas that have been disturbed.

This map unit is in capability subclass VIIs, nonirrigated. The Akela soil is in horticultural group 6.

540—Welser extremely gravelly fine sandy loam, 2 to 8 percent slopes. This very deep, well drained soil is on summits and side slopes of erosional fan remnants (fig. 1). It formed in alluvium derived from various kinds of rock that have a high content of lime.

Typically, 80 percent of the surface is covered with a desert pavement of pebbles. There is a dark desert varnish on the exposed surfaces of the rock fragments. The surface layer is light yellowish brown extremely gravelly fine sandy loam about 1 inch thick. The underlying material to a depth of 63 inches is light brown extremely gravelly fine sandy loam and very gravelly fine sandy loam, averaging extremely gravelly fine sandy loam.

Included in this unit are about 5 percent Arizo soils, flooded, in channels and 10 percent Goodsprings soils on erosional fan remnants. Included areas make up about 15 percent of the total acreage. The percentage varies from one area to another.

Permeability of the Welser soil is moderately rapid. Available water capacity is very low. Effective rooting depth is 60 inches or more. Runoff is medium, and the hazard of water erosion is slight. The hazard of soil blowing is moderate if the desert pavement is disturbed. Some pedons have an indurated, lime-cemented hardpan at a depth of 40 to 60 inches or more.

Most areas of this unit are used as habitat for desert wildlife and for recreation. A few areas are used for urban development.

This unit is well suited to the construction of dwellings.

Unless the density of housing is too high, septic tank absorption fields generally function well in this unit.

Roads can easily be constructed and maintained on this unit.

The main limitations for lawns and landscaping are the presence of pebbles throughout the soil and the very low available water capacity. Topsoil is needed for best results when landscaping, particularly in areas used for lawns. Frequent irrigation of lawns, gardens, and most other plantings is needed because of the limited available water capacity of the soil. Lawn grasses, shrubs, and trees that are not sensitive to lime-induced chlorosis are well suited to use in landscaping. Annual applications of iron chelates reduce the effects of chlorosis.

Intermittent streams form the drainageways in this unit. These drainageways are subject to rare or occasional periods of high-velocity flooding. Care should be taken during urbanization to accommodate the runoff from the drainageways. If drains become plugged during a major flood, accelerated erosion and damage to roads, buildings, and other structures can occur.

This map unit is in capability subclasses IVs, irrigated, and VIIs, nonirrigated. It is in horticultural group 2.

542—Welser-Aztec complex, 2 to 8 percent slopes. This map unit is on erosional fan remnants.

This unit is 55 percent Welser extremely gravelly fine sandy loam, 2 to 8 percent slopes, and 30 percent Aztec very gravelly fine sandy loam, 2 to 8 percent slopes. The Welser soil is on summits and side slopes of the fan remnants, and the Aztec soil is on side slopes of the fan remnants. The components of this unit are so intricately intermingled that it was not practical to map them separately at the scale used.

Included in this unit are about 5 percent Arizo soils, flooded, in channels and 10 percent Goodsprings soils on erosional fan remnants. Included areas make up about 15 percent of the total acreage. The percentage varies from one area to another.

The Welser soil is very deep and well drained. It formed in alluvium derived dominantly from limestone and dolomite. Typically, 95 percent of the surface is covered with a desert pavement of pebbles. There is a dark desert varnish on the exposed surfaces of the rock fragments. The surface layer is light yellowish brown extremely gravelly fine sandy loam about 1 inch thick. The underlying material to a depth of 63 inches is light brown extremely gravelly fine sandy loam and very

TABLE 15.--SOIL AND WATER FEATURES

["Flooding" and "water table" and terms such as "rare" and "occasional" are explained in the text. The symbol < means less than; > means more than. Absence of an entry indicates that the feature is not a concern]

MEETING MINUTES

Project Number: OLY1603.000

Project Name: Skye Canyon MPU Connectivity

Meeting Date: 2/7/2017

Meeting Location: CLV Public Works – Granite Conference Room (9th Floor)

Meeting Topic: SHG and Olympia proposal for new MPU facility alignments

Attendees:	*Company Name:*	*Contact Info (email/phone)*
Steve Jones	SHG	sjones@shg-inc.com
Jerry Slater	SHG	jslater@shg-inc.com
Marc Bolduc	Olympia	mbolduc@olympiacompanies.com
Ben Morris	Olympia	bmorris@olympiacompanies.com
Allen Pavelka	CLV	apavelka@lasvegasnevada.gov
Oh-Sang Kwon	CLV	okwon@lasvegasnevada.gov
Peter Jackson	CLV	pjackson@lasvegasnevada.gov
Mark Sorensen	CLV	msorensen@lasvegasnevada.gov
Randy McConnell	CLV	rmcconell@lasvegasnevada.gov
Abigail Mayrena	CCRFCD	amayrena@regionalflood.org
Todd Myers	CCRFCD	tmyers@regionalflood.org

Meeting Notes:

Item:	*Discussion:*
1	**New MPU Alignment:** SHG addressed that in the interest of the parties involved, the MPU facilities by Skye Canyon are proposed to be re-aligned toward and in Moccasin. The proposal includes utilization of the east half of the 160 acres of BLM property to route the runoff from Log Cabin to Moccasin. Olympia discussed that value engineering considering cost and constructability was performed when choosing the proposed diagonal alignment, considering the City's partnership in cost participation of these MPU facilities. The City discussed it would rather have the facility be in the already dedicated right-of-way, north-south in Skye Canyon Park and east-west in Moccasin, around the BLM property; thus, not encumbering any future development. Olympia questioned why the City had previously approved a plan that encumbered a much larger footprint on the property for a detention basin and should allow the new diagonal storm drain which is much smaller of an encumbrance. The City requested that SHG provide evidence of the value engineering that lead to the chosen diagonal alignment, and would review this material in-house in considering the proposed alignment.
2	**Concept Schematic @ Log Cabin Ranch:** SHG discussed that the proposal included constructing a new RCB in the north half of Moccasin adjacent to Log Cabin Ranch. This facility would be a new MPU facility, parallel to the future MPU facility already on the master plan for conveyance of the 10,000+ cfs diverted from US-95 to the north. SHG believes that Moccasin in its current state is its ultimate width with traffic control present that could be considered permanent, allowing the new MPU facility on the north side of Moccasin within existing right-of-way. The new MPU facility would outlet into an existing public drainage easement on the Log Cabin Ranch property and Olympia would construct the appropriate energy dissipater. The City understood the SHG proposal and deferred any decision on the concept to an internal discussion after it has reviewed the available rights to construct in this area.
3	**RCB Culvert under US-95:** CLV discussed that in order to proceed with its agreements and contracts with NDOT, it needed verification of the RCB culvert size and alignment crossing US-95. There is concern that the current state of the changing Master Drainage Study does not allow the City to proceed

Item:	Discussion:
	in its funding agreements with NDOT regarding the culvert that is being proposed. It was agreed by all parties that the facility as outlined currently in the Master Drainage Study is different in alignment, design flow rate and size from what is shown in the current MPU. CCRFCD questioned if the Master Plan Amendment (MPA) for the project could be accelerated in order to satisfy the agreement and funding questions that the City discussed above. SHG discussed that the framework hydrology and routing through the US-95 culvert is not changing with the outstanding issues on Moccasin's alignment; therefore, if an MPA is prepared it would be accurate to formally add the RCB culvert onto the MPU. It was noted that the City, NDOT and the Interchange's design engineer GCW have reviewed and found acceptable the hydrology and hydraulics to accompany the 13-ft by 8-ft RCB size; therefore, pursuing an MPA without approval of the Master Drainage Study would be considered acceptable. CCRFCD discussed that progression of the MPA and their review of the MPA would provide confidence to NDOT that the facility is an MPU facility and thus considered ultimate for construction with the interchange. SHG estimated it would take about 1 month to prepare and submit the MPA, concurrent to both CLV and CCRFCD. This timeframe would result in an estimated 3 to 4 months prior to full approval of the MPA after City Council approval. It was estimated by the City that this schedule would not coincide with the timing that the City needs to finalize its agreements with NDOT; however, it was agreed that if the MPA was submitted and being reviewed by CCRFCD to verify hydrology and hydraulics that this would likely be an acceptable milestone for the City to finalize its agreements. SHG and Olympia agreed to undertake this effort within the framework discussed above.
4	**Interim Phasing:** SHG and Olympia indicated that it would like to discuss and explore with the City its plan to develop an estimated 100 to 120 acres in the Active Adult parcel, east of US-95 near the Log Cabin and Skye Canyon Park intersection, without the MPU drainage infrastructure discussed in this meeting installed. It was noted that this interim phasing plan could be included in the next submittal of the Master Drainage Study. The City requested to defer that conversation until the other items discussed in this meeting are finalized, and so it could discuss internally its feasibility.

Action Items:

Item:	Person:	Comments:
1	SHG	Provide conceptual profiles of different MPU facility alignments from Log Cabin to Moccasin for the City's consideration of the Olympia/SHG proposed diagonal alignment across the BLM 160 acre property.
2	CLV	Investigate/evaluate the proposed alignment and legal rights of the new MPU facility in Moccasin at Log Cabin Ranch, as conceptually shown on the exhibit from the meeting.
3	SHG	Prepare MPA with an estimated duration of 1 month.
4	CLV/SHG/Olympia	Follow-up meeting to be scheduled to discuss a new interim development phasing in the Active Adult area without CCRFCD infrastructure installed.

Meeting Notes:

Item:	*Discussion:*
1	**MPA Key Points:** SHG submitted the MPU Amendment for Skye Canyon to CLV and CCRFCD. SHG discussed that the routing of the regional facilities is as previously reviewed by the City and CCRFCD, with regional facilities planned to route storm runoff to Moccasin. The major differences between this Amendment and the 2013 MPU is the following: • Reduced detention basins from 3 to 2 at the west property boundary. • Added sediment basin in Kyle Canyon Road that attenuates the flow rate to the US-95 culvert. • Added alignment in Log Cabin to take the flow to Moccasin, including new parallel facility in Moccasin from El Capitan to the Upper Las Vegas Wash. • Category B facilities represented developer funded facilities, Category A facilities represented facilities that were in the Development Agreement as cost-shared between the developer and the City. CLV revealed that recently the School District expanded their reservation request on the BLM property at the northeast corner of Log Cabin and Skye Canyon Park Drive; therefore, the diagonal alignment of the MOLC alignment presented in the MPA will need to be changed to be within the existing right-of-ways of Skye Canyon Park and Moccasin as to not conflict with this reservation. SHG discussed that the overall cost of the Amendment shows a higher facility cost than the 2013 MPU, but the public funding obligation is less when consideration of the cost-sharing is taken into account. CCRFCD and CLV acknowledged that it is important to know that, but can still be an approvable document in accordance with their guidelines.

Prepared By: Steve Jones

Please notify the preparer if you have any questions, concerns or additions to these minutes within 2 business days. After 2 business days the content of this document will be considered accurate and accepted as the final recordation.

Item:	Discussion:
2	**Cost-Sharing:** CLV explained that there is a pending memo to be distributed by City's senior management in the near future that will reject the cost-sharing participation from the City for the regional facilities east of US-95, since the regional alignment of Skye Canyon flows is now back to Moccasin and not in Log Cabin. Additionally, the CLV also discussed that if cost-sharing is no longer viable, the regional culvert under US-95 may not be constructed because it is primarily for Skye Canyon development drainage area. SHG, Olympia and CLV requested a follow-up meeting to discuss this memo in further detail.

MEETING NOTES

Date: June 5, 2017 1:00 PM

Location: DSC 9th Floor Granite Conference Room

Purpose: Coordinate Public/Private Partnership for Skye Canyon Moccasin Regional Storm Drain Facilities

Attendees: CLV: Allen Pavelka, Jeremy Leavitt, Oh-Sang Kwon, Gina Venglass, Lucien Paet
SHG: Jerry Slater, Mark Failla, Lant Leavitt
Olympia: Marc Bolduc

- **PROJECT DESCRIPTION**
  - Verified limits of project. Agreed to breakdown of private and public reaches per attached exhibit.

- **PROJECT APPROACH**
  - Cost sharing agreement needs to be updated to match agreed upon breakdown. Revising the Development Agreement is not necessary as it already includes a provision for mutually agreeable revisions. A letter of understanding will be prepared to document agreed upon funding breakdown and design process. SHG to prepare a draft version of letter for CLV/Olympia review.

  - CLV reach (Moccasin Road) will be processed like a public works project. Gina Venglass will be CLV PM. Submittals will include 30%, 90% and Final. The 30% submittal will include alternatives as necessary and identify ROW/easement acquisition needs. The private facility reach will be routed through development services. CLV Public Works is to receive a courtesy copy.

  - Not necessary to update hydrology for latest USGS soils data.

- **SKYE MDS, SKYE MPA, MOCCASIN MPU - ORDER OF PROGRESS**
  - Skye Canyon MDS should be submitted first. MPA may be submitted after receiving (and incorporating, if necessary) comments from MDS review. MPA needs to be approved prior to 90% design plans. MPA should be prepared ASAP so CLV can get in line for project funding.

- **PUBLIC REACH DESIGN FLOW RATE**
  - Facility to be constructed should be designed to receive flow from Skye Canyon. MPA will include additional cells to accommodate full offsite flow from Moccasin Road. Future facility will be on north side of currently planned facility and alignment will be identified in MPA with different MPU ID labels.

- **MOCCASIN ROAD ALIGNMENT**
  - The HOA that owns/maintains private channel adjacent to Moccasin Road is interested in turning this over to the City. The 30% design report should address the possibility of routing the proposed Moccasin MPU facility through this right-of-way.

- **ADDITIONAL ITEMS**
  - CLV prefers a reinforced concrete box facility, but is not opposed to an arch culvert. An arch culvert would be required to provide a minimum 5-ft vertical wall for maintenance accessibility, and leave enough space horizontally for future facilities. Special attention would need to be paid to project special provisions if an arch is proposed.

  - CLV may require a future collection stub at Moccasin Road / El Capitan Way. This has the potential to affect the facility profile, and therefore will be determined as early as possible in the design process.

  - BLM easement may be necessary at Skye Canyon Park Drive (Ft Apache) / Moccasin Road. This will be addressed in 30% Report.

  - Geotechnical borings along MPU facility alignment to be provided at 750-ft spacing.

  - SHG to provide bid and construction phase support.

  - SHG to prepare/present project presentations.

  - The usual review fees will apply for privately funded facility reach.

- **SCHEDULE**
  - In order to expedite project, CLV PW agrees to 6 week review time for submittals.

- **ACTION ITEMS**
  - SHG to prepare letter of understanding for CLV/Olympia review.
  - CLV to provide SHG/Olympia with Moccasin Road ultimate street section.

land use category shown on the Master Land Use Plan. Upon the relinquishment of the NDOT Easement on the Property, the City will accept complete applications from the Master Developer for land use entitlements or mapping actions for any portion of the Property that had been encumbered by the NDOT Easement including a vacation application for existing City of Las Vegas easements or grants associated with the NDOT frontage road.

7.08 Flood Control.

(a) Obligation to Construct Flood Control Facilities solely on Master Developer. Master Developer shall design and construct flood control facilities that are identified as Master Developer's responsibility in the Master Drainage Study. Master Developer acknowledges and agrees that this obligation shall not be delegated to, transferred to or completed by any Designated Builder.

(b) Other Governmental Approvals. The Clark County Regional Flood Control District, the Nevada Department of Transportation and any other state or federal agencies, as required, shall approve the Master Drainage Study prior to final approval from City. Clark County Department of Public Works shall receive a copy of the Master Drainage Study and shall have the opportunity to comment.

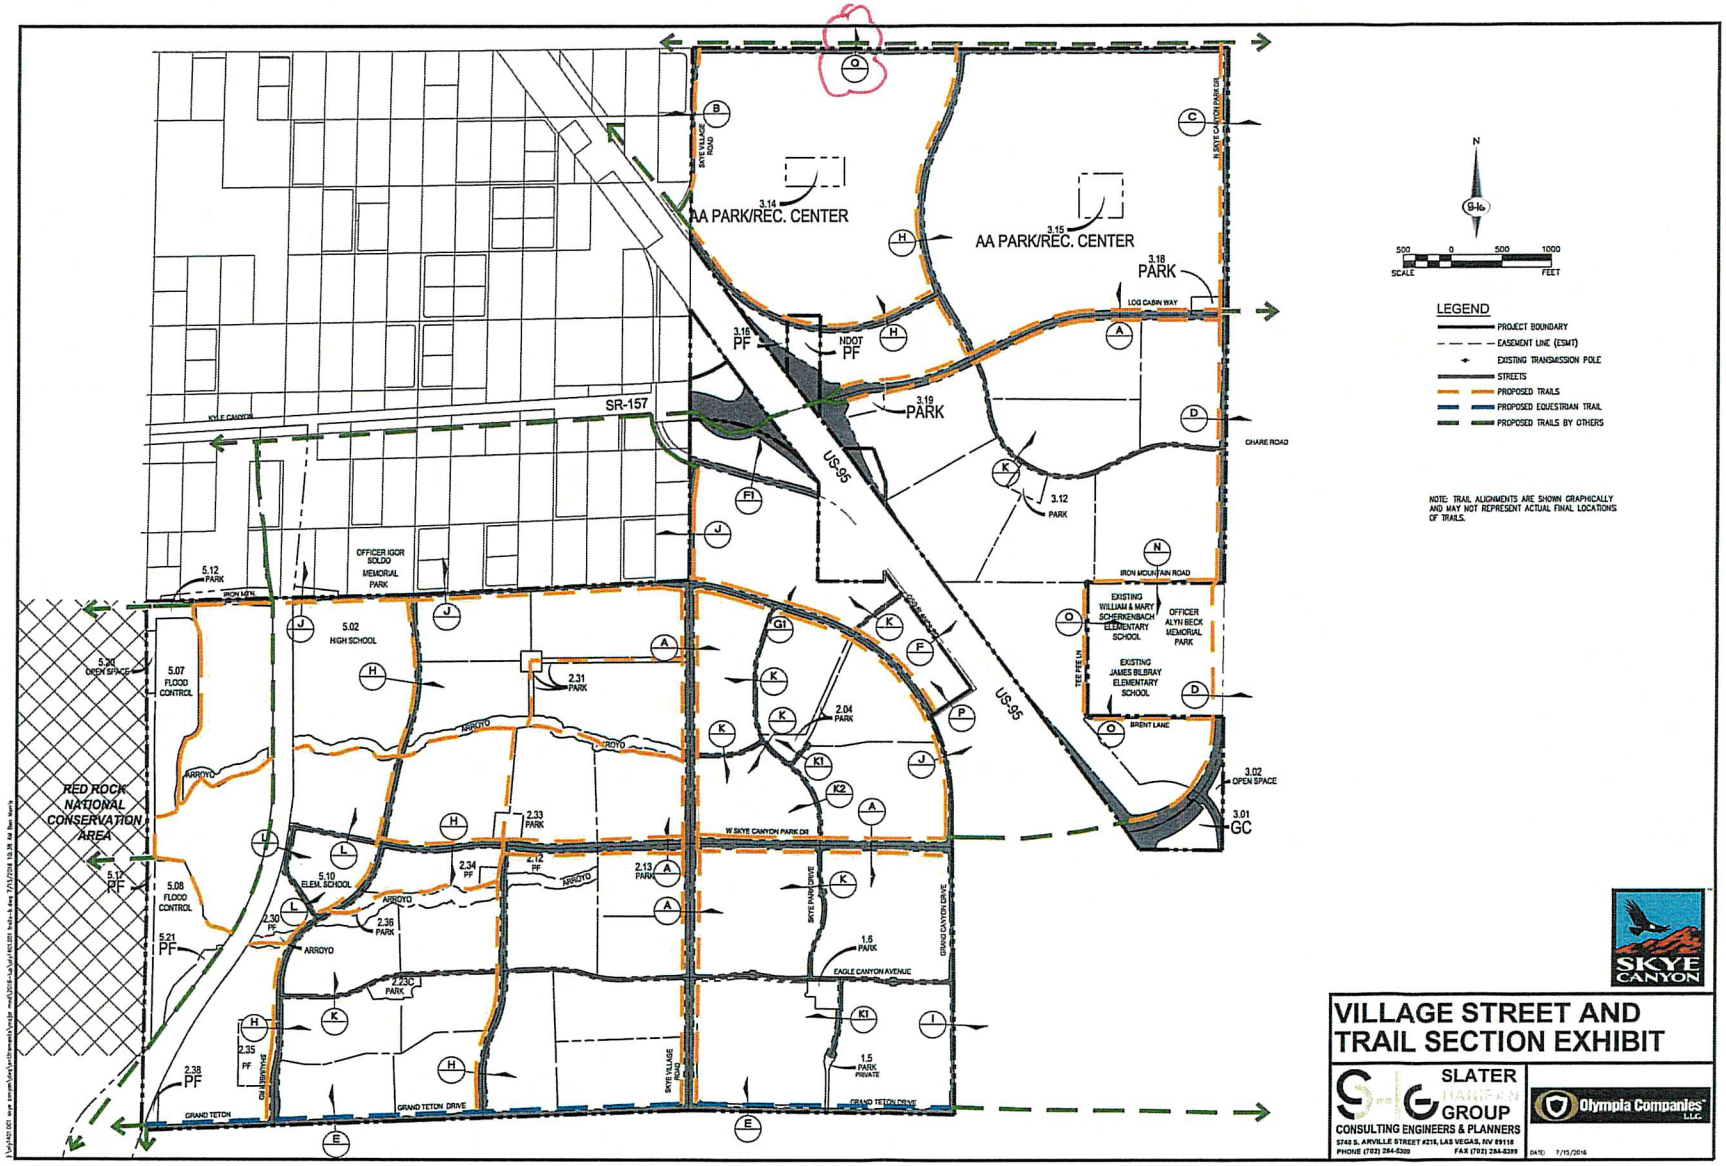

(c) Updates. The Director of Public Works may require an update to the Master Drainage Study or Master Technical Study as a condition of approval of the following land use applications: tentative map, residential or commercial; site development plan review, multifamily or commercial; or parcel map if those applications are not in substantial conformance with the approved Master Land Use Plan or Master Drainage Study. The update must be approved prior to the approval of any construction drawings and the issuance of any final grading permits. An update to the exhibit in the approved Master Drainage Study depicting proposed development phasing in accordance with the Development Agreement shall be submitted for approval by the Flood Control Section.

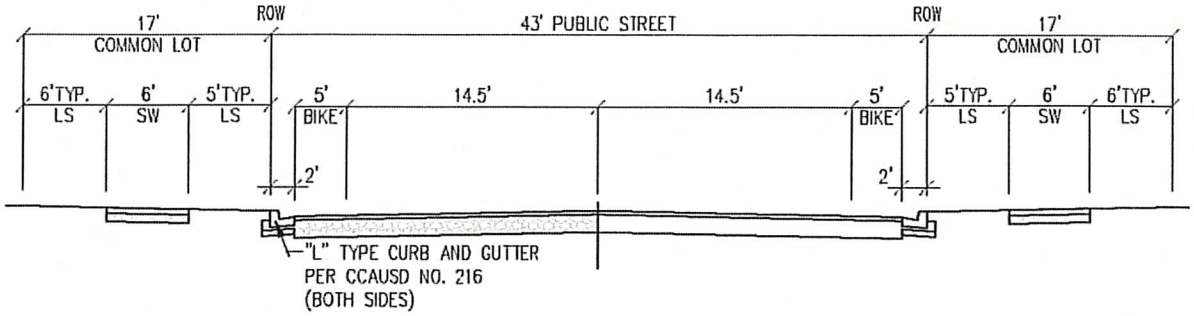

(d) Regional Flood Control Facility Construction by Master Developer. The Master Developer agrees to design and substantially complete the Clark County Regional Flood Control District facilities as defined in the Master Drainage Study pursuant to an amendment to the Regional Flood Control District 2008 Master Plan Update prior to the final inspection of the first unit within each area protected by the appropriate drainage facility.

(i) Currently, a portion of Parcel 5.06, as depicted on the Master Land Use Plan attached as Exhibit "F", is reserved by City for future flood control needs in addition to Parcels 5.07 and

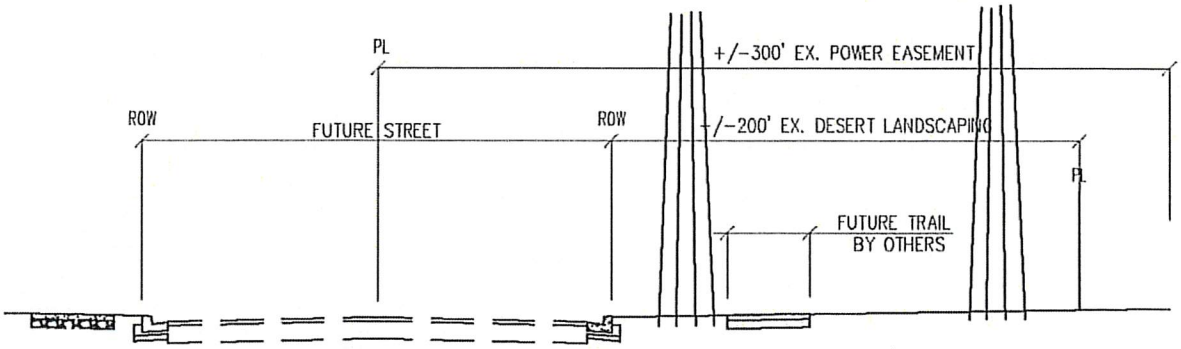

5.08. The Master Developer shall not file and the City shall not accept any applications from the Master Developer for land use entitlements or mapping actions for that portion of Parcel 5.06 reserved by City for future flood control needs. However, if City agrees that all or a portion of the reserved Property on Parcel 5.06 is not necessary for the City's flood control measures, then upon City's written notification to Master Developer of its release of any portion of Parcel 5.06 that is not needed for the City's flood control measures, said portion of Parcel 5.06 may be developed in accordance with the land use category shown on the Master Land Use Plan. Upon the City's release of its reservation of that portion of Parcel 5.06, the City may accept applications from the Master Developer for land use entitlements or mapping actions for that portion of the Property that had been reserved by the City for flood control.

(ii) Additionally, a regional MPU facility from Skye Village Road east across US 95 will be constructed with a combination of public and private monies ("MPU Facility"). The Master Developer shall pay for the design and construction of the MPU Facility as defined in the Master Drainage Study pursuant to an amendment to the Regional Flood Control District 2008 Master Plan Update. The Parties agree that Master Developer shall pay for and construct one of two (2) MPU alternatives outlined in the Master Drainage Study. Because the MPU Facility is a regional facility that will benefit downstream property owners and the City, Master Developer shall be reimbursed for 49% of the total cost of the construction of the MPU Facility pursuant to: 1) an interlocal contract between the Parties and the Regional Flood Control District in accordance with Chapter VI, Section D, Developer Participation of the District's Policies and Procedures or 2) some other reimbursement or cost sharing mechanism mutually agreed upon by the Parties. Requirements for notification of funding will be specified in a separate agreement, if necessary, between the City and the Master Developer. The Master Developer agrees, with City's assistance, to update and add the MPU Facility to the Regional Master Plan and the City agrees to prioritize affected facilities and update the 10 Year Construction Program after the approval of the Master Plan Amendment and after an estimated construction schedule is provided by the Master Developer. Master Developer shall submit and receive acceptance of 90% construction drawings for each phase. Within six (6) months after Master Developer submits and receives acceptance of the 90% construction drawings for the first phase, City agrees to facilitate the reimbursement of 49% of the total cost of the construction of the MPU Facility to Master Developer in phases. . The City's reimbursement obligation is limited to the MPU Facilities identified as shared cost in the Master Drainage Study and will

US 95 Kyle Canyon Interchange Excerpt

SLATER HANIFAN GROUP
CONSULTING ENGINEERS & PLANNERS

OLY1608.000

August 10, 2016

Mr. Oh Sang Kwon, P.E.
Flood Control Project Manager
City of Las Vegas Department of Public Works
333 N. Rancho Drive – 7th Floor
Las Vegas, Nevada 89106

Subject: Response to City of Las Vegas Public Works Comments on the Supplement for US95/Kyle Canyon Road Interchange – Conceptual Design for CCRFCD Regional Facility Crossing

Dear Mr. Kwon:

This letter is submitted in response to the comments in your review memorandum dated August 2, 2016, regarding the above referenced project. A copy of the City of Las Vegas (CLV) Department of Public Works comments is provided behind this letter, and the comments have been individually addressed as follows:

Sheet 3

1. **Comment:** *Correct the match line station reference in left plan view to 54+50.00.*

   Response: The match line reference station has been updated accordingly.

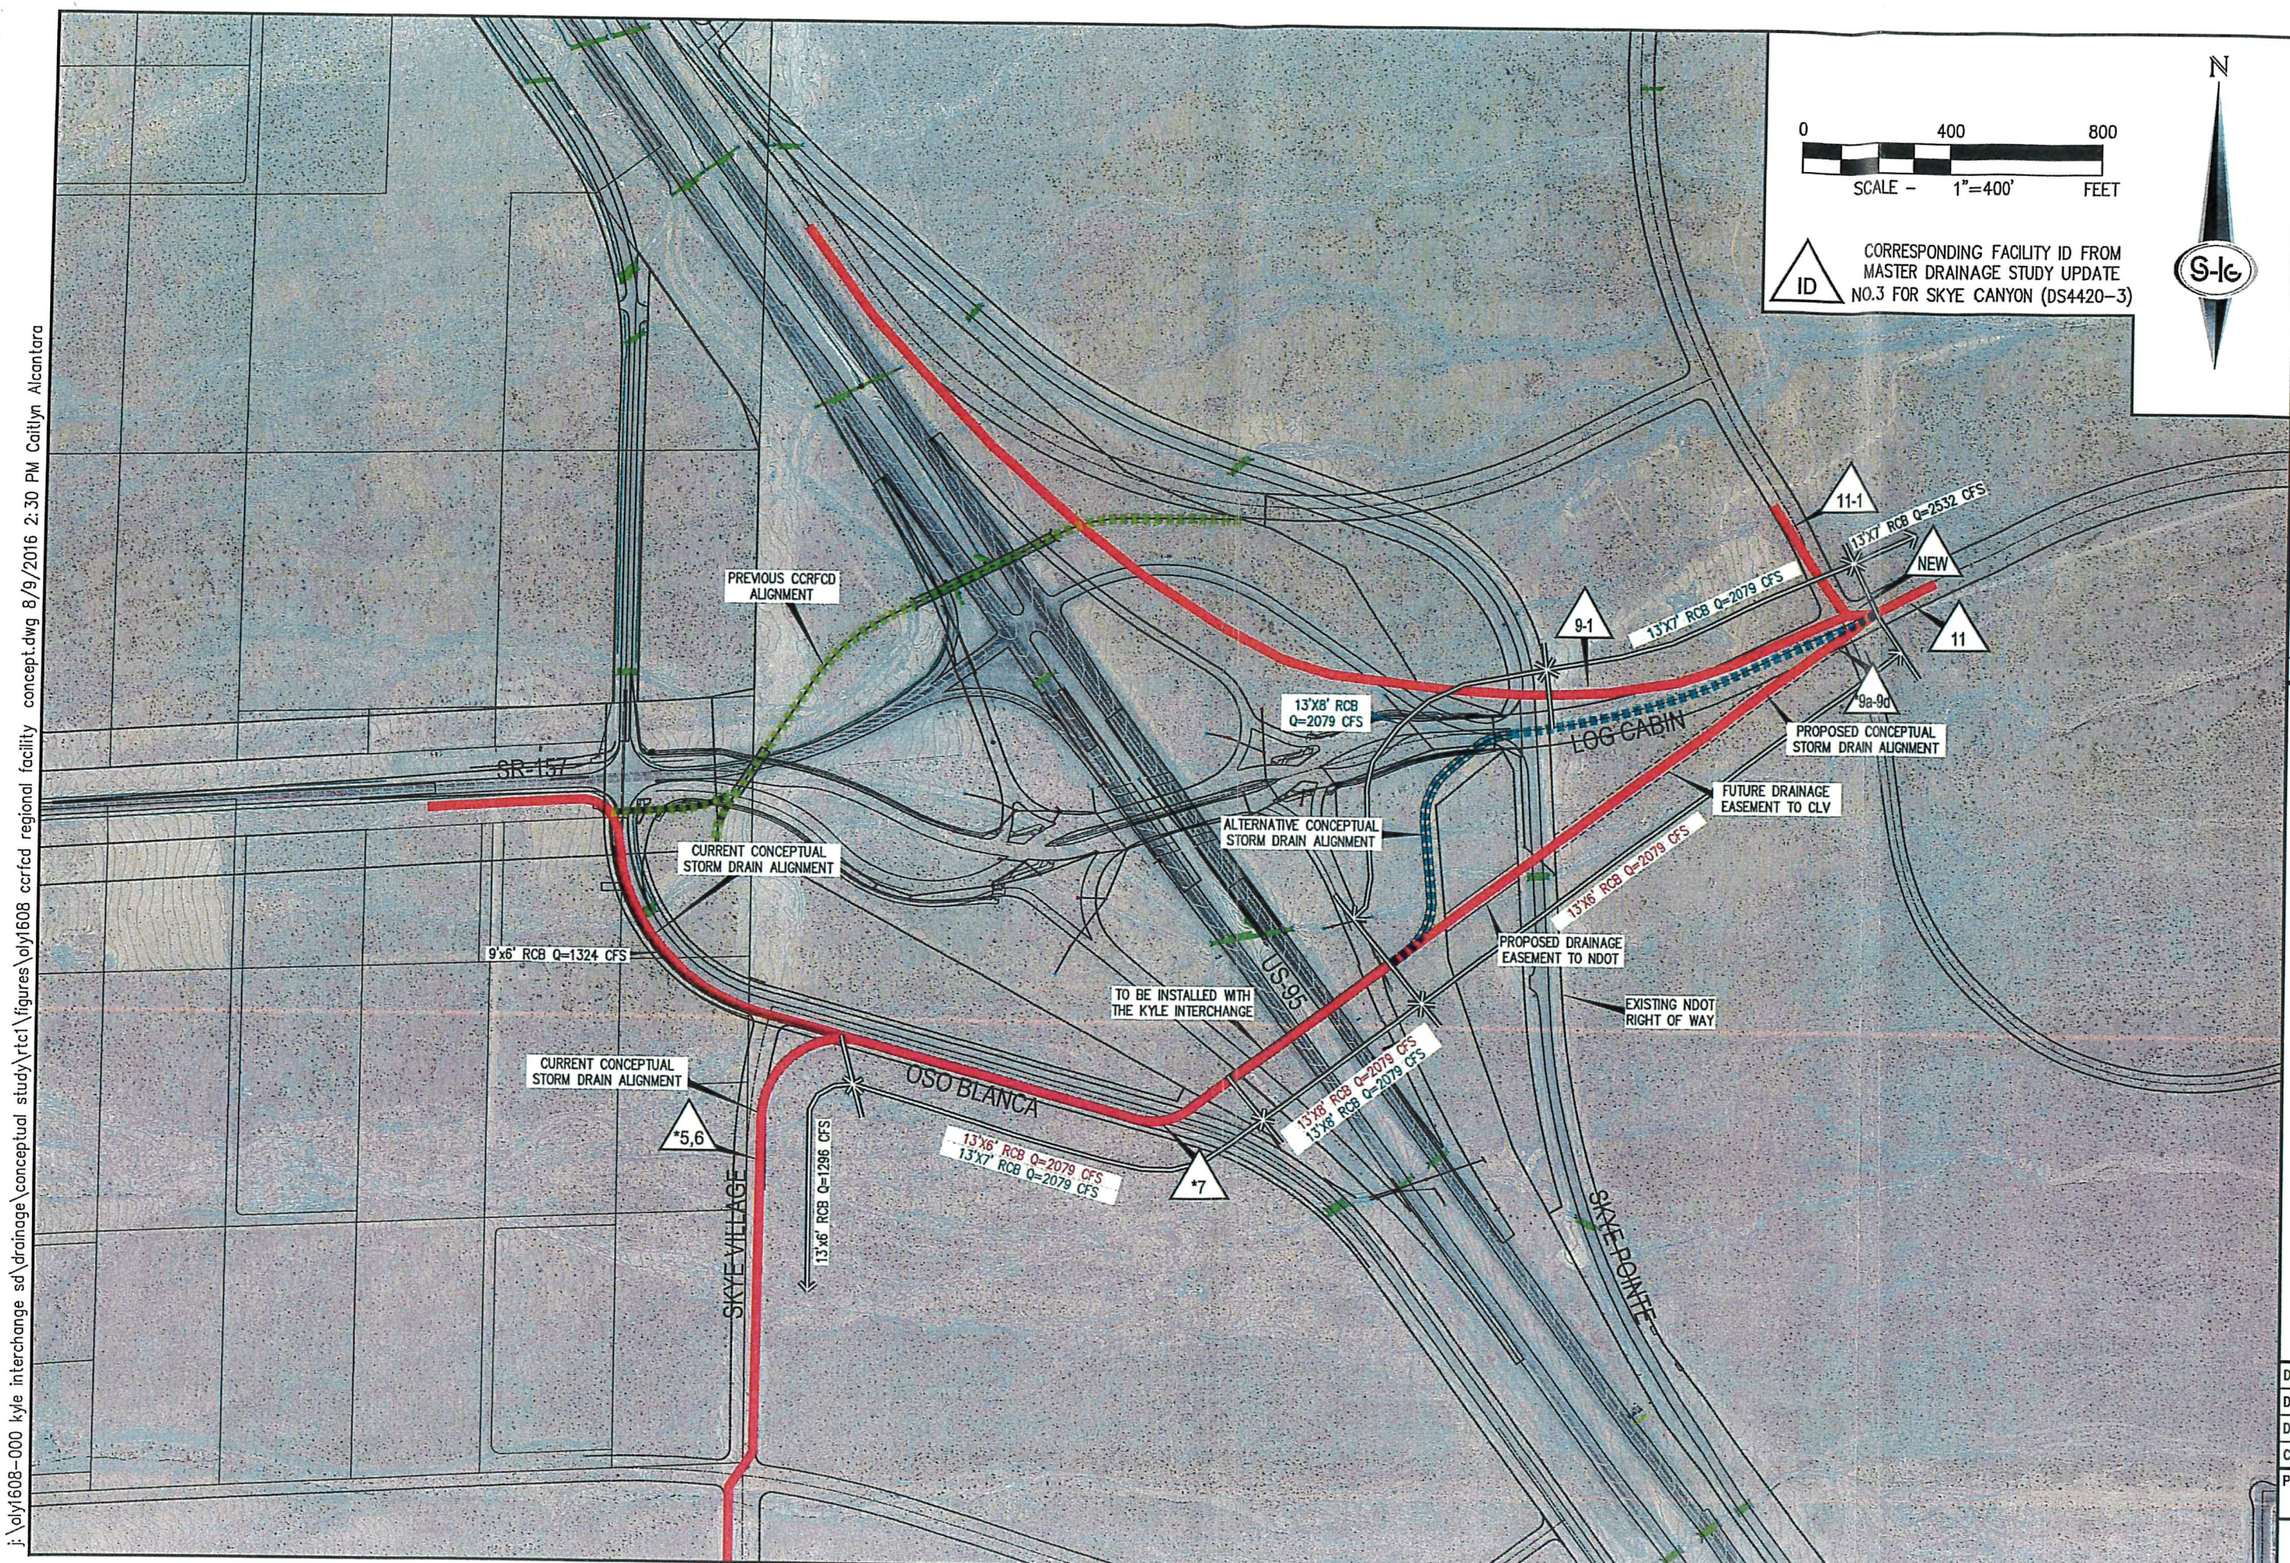

2. **Comment:** *Minor discrepancies in slope between the hydraulic model and profile are shown between Stations 48+50 and 54+50.*

   Response: Acknowledged. The slope callout on the profile sheets has been updated to adequately reflect the slope on the hydraulic models in Appendix A. Note that there is a slope of 0.0% shown in the model at Station 5363.30, because the hydraulic model has analyzed where the storm flows from the Skye Village and SR157 alignments enter the 25-ft wide junction structure as a point confluence with zero length.

3. **Comment:** *Verify the width of the Junction Structure in the hydraulic model. The model shows a width of 25 feet and the two RCBs connecting are 13 feet wide.*

   Response: Anticipating the connection of two (2) RCB's, one is 13-ft wide and the second is 9-ft wide, each with a wall thickness of 1-ft, and 1-ft of separation between the two boxes at the junction structure, the hydraulic models showing a junction structure width of 25 feet is considered accurate and no changes to the model are necessary.

4. **Comment:** *The HGL is shown up to 11 feet above the top of the 13-foot wide by 6-foot high RCB near the Sky Village Road and Oso Blanca Road Intersection. Will the surcharged HGL at this location allow flexibility for future connections to the CCRFCD Facility (i.e. the 10-foot wide by 4-foot high laterals at Stations 45+50, 46+00, and 46+50)?*
